EXPLANATORY NOTES AND FOOTNOTES .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Estimates of Labour Income

January, 1961

Wages, salaries, and supplementary labour income received by Canadian employees was estimated at \$1,494.2 million for the month of January. This total is \$35.2 million or 2.3 p.c. lower than the December, 1960 figure, but is \$31.8 million or 2.2 p.c. higher than the January, 1960 estimate. Seasonally adjusted, the total of labour income declined by \$5.4 million or 0.3 p.c. between December and January. Manufacturing, construction and the transportation, storage and communication industries were mainly responsible for this decrease.

From December to January, the seasonally adjusted total of labour income increased by 0.3 p.c. in the Atlantic and Prairie regions and was up 1.7 p.c. in British Columbia. These increases were outweighed by declines of 1.0 p.c. in Quebec and 0.6 p.c. in Ontario.

Manufacturing wages and salaries, seasonally adjusted, decreased over the month by 1.1 p.c. in Ontario, 1.4 p.c. in Quebec and 2.3 p.c. in the Atlantic region. Increases of 1.0 p.c. and 2.7 p.c. were recorded for British Columbia and the Prairie region respectively.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.

 EXPLANATORY NOTES AND FOOTNOTES .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Estimates of Labour Income

February, 1961

Canadian employees earned an estimated total of \$1,501.4 million in wages, salaries, and supplementary labour income during the month of February. This figure is \$7.6 million or 0.5 p.c. greater than the January total and \$36.4 million or 2.5 p.c. above the February, 1960 estimate. The wages and salaries totals for February 1961 were higher than those for February, 1960 in all industries except forestry, mining, manufacturing and construction.

Seasonally adjusted, the total of labour income advanced by \$6.9 million or 0.4 p.c. from January to February and was estimated at \$1,563.0 million in the later month. This gain raised seasonally-adjusted labour income slightly above previous record levels recorded in the last two months of 1960. Forestry, mining, and trade did not share in the February increase.

Between January and February, seasonally-adjusted labour income rose by 0.8 p.c. in Quebec and Ontario and 0.1 p.c. in the Atlantic region. Declines were recorded for British Columbia (0.3 p.c.) and the Prairie region (0.8 p.c.) during this same period.

Over the month, manufacturing wages and salaries, seasonally adjusted, rose by 1.2 p.c. in Ontario; 0.9 p.c. in Quebec and British Columbia; and 0.3 p.c. in the Atlantic region. The figure for the Prairie region was 0.5 p.c. lower in February than in January.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

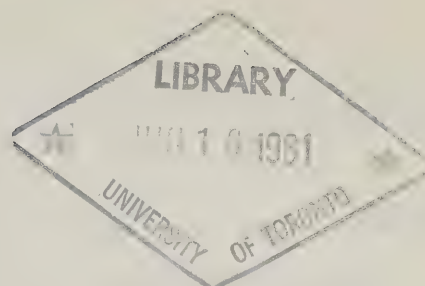

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.

 EXPLANATORY NOTES AND FOOTNOTES .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Estimates of Labour Income

March, 1961

Total labour income for the month of March was estimated at \$1,507.4 million, an increase of \$5.1 million or 0.3 p.c. from the previous month and \$37.6 million or 2.9 p.c. from March, 1960.

Seasonally adjusted, the March total of wages, salaries, and supplementary labour income was estimated at \$1,567.2 million. This figure is \$3.1 million or 0.2 p.c. higher than the February estimate.

The seasonally-adjusted total of labour income for the first quarter of 1961 was \$4,687.9 million. This estimate is \$8.1 million or 0.2 p.c. above the fourth quarter, 1960 total. The gain was smaller than any previous quarter-to-quarter increase reported in the post-war period except that occurring between the third and fourth quarter of 1957.

Agriculture and public utilities were up 3.8 p.c. and 3.0 p.c. respectively from the fourth quarter, 1960 to the first quarter, 1961. Non-government service advanced 1.3 p.c. while the finance, insurance and real estate division and government service each increased by about 1.0 p.c. Transportation, storage and communication (including post office) showed a gain of 0.5 p.c. over the same period. Wages and salaries in manufacturing and in trade were up by 0.2 p.c.

Quarter-to-quarter declines were recorded for the remaining industries. Mining wages and salaries declined by 0.8 p.c. from the fourth quarter of 1960 to the first quarter of 1961. Construction was down 3.5 p.c. and forestry wages and salaries declined 10.4 p.c. over the same period.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Estimates of Labour Income

April, 1961

Wages, salaries, and supplementary labour income received by Canadian paid workers rose to a total of \$1,539.7 million for the month of April. This estimate is \$29.6 million or 2.0 p.c. higher than that for the previous month and \$45.6 million or 3.0 p.c. greater than the April, 1960 figure.

Seasonally adjusted labour income advanced to a total of \$1,576.0 million in April, an increase of \$6.0 million or 0.4 p.c. from the March estimate. Changes of less than 1.0 p.c. were recorded for all industries except forestry (up 11.7 p.c.) and transportation, storage and communication (down 1.5 p.c.). Small increases occurred in all industries except agriculture, construction and public utilities where there were minor declines in labour income.

Gains were recorded in seasonally adjusted estimates of total labour income for all regions except British Columbia. Quebec and the Atlantic region were up by 0.1 p.c. and 0.2 p.c. respectively in the March to April comparison. Over the same period, the Prairie region advanced by 0.6 p.c. while Ontario had a gain of 0.7 p.c. Total labour income for British Columbia in April was 0.8 p.c. lower than in March.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure; 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.

 EXPLANATORY NOTES AND FOOTNOTES .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Estimates of Labour Income

May, 1961

Total labour income in May was \$1,586.3 million, up 3.3 p.c. from a revised total of \$1,536.2 million for April, 1961. The May, 1961 total was 3.2 p.c. higher than the figure for May, 1960.

Seasonally adjusted labour income rose to \$1,576.3 million in May, an increase of 0.3 p.c. from the April figure of \$1,571.7 million. Industrially, the largest percentage changes were in mining (up 4.0 p.c.), and construction (down 3.4 p.c.). Minor increases occurred in all the remaining industries except agriculture, fishing and trapping.

Between April and May, gains were recorded in seasonally adjusted estimates of labour income for all regions except Quebec and British Columbia. The Atlantic and Prairie regions advanced by 0.3 p.c. while Ontario had a gain of 0.4 p.c. Quebec declined by 0.2 p.c. and British Columbia by 0.9 p.c. in the April to May comparisons.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Estimates of Labour Income

June, 1961

Canadian employees received an estimated total of \$1,656.6 million in wages, salaries and supplementary labour income during the month of June. This figure is \$63.9 million or 4.0 p.c. higher than the May total and \$66.4 million or 4.2 p.c. above the June, 1960 estimate.

The seasonally adjusted total of labour income for June was estimated at \$1,604.6 million, a gain of \$22.0 million or 1.4 p.c. over the revised May estimate. Retroactive wage payments of \$8.0 million are included in the June estimates.

The second quarter total of labour income, seasonally adjusted, was \$4,758.9 million, an increase of \$68.2 million or 1.5 p.c. from the first quarter figure. Gains occurred in all industries except agriculture, forestry, construction and public utilities. Mining wages and salaries were up 2.6 p.c. from the first to the second quarter. The transportation, storage and communication industries advanced 2.3 p.c. although more than half of this increase was attributed to the retroactive wage payments mentioned above. Gains were also recorded in the finance, insurance and real estate group (2.2 p.c.); manufacturing (2.0 p.c.) and non-government service (1.9 p.c.). Increases of 1.2 p.c. were recorded both for trade and for government service. Public utility wages and salaries remained unchanged from the first to second quarter estimates. Agriculture wages and salaries were down 2.5 p.c. Wages and salaries in Forestry and construction were lower by about 1.0 p.c. in the quarter-to-quarter comparison.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

### Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Estimates of Labour Income

July, 1961

Total labour income for the month of July was estimated at \$1,644.6 million, down \$14.6 million or 0.9 p.c. from the revised June total, but up \$65.7 million or 4.2 p.c. from the July, 1960 figure.

Seasonally adjusted labour income was estimated at \$1,610.9 million for the month of July. Although substantial retroactive wage payments were included in the June figure, the July estimate was \$3.9 million or 0.2 p.c. above the estimate for the previous month.

Most industries shared in the gain in total labour income occurring from July, 1960 to July, 1961. Wage and salary aggregates were higher by about 2.0 p.c. in agriculture and in public utilities. Manufacturing was up 3.4 p.c. while increases in the transportation, storage and communication group and in trade amounted to 4.2 p.c. and 4.5 p.c. respectively. Increases were also recorded in the finance, insurance and real estate group (7.4 p.c.); government service (8.4 p.c.) and non-government service (9.0 p.c.). Total wages and salaries declined over the year in mining (down 0.4 p.c.); construction (down 3.4 p.c.) and forestry (down 13.6 p.c.)

In each region, total labour income was higher in July, 1961 than in July, 1960. Gains of about 5.0 p.c. were recorded for the Atlantic region and for Ontario. Smaller percentage increases occurred in the Prairie region (4.1 p.c.), Quebec (3.6 p.c.) and British Columbia (1.7 p.c.).

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.

EXPLANATORY NOTES AND FOOTNOTES .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Estimates of Labour Income

August, 1961

The total of wages, salaries, and supplementary labour income was estimated at \$1,663.4 million for the month of August. This figure is \$11.9 million or 0.7 p.c. higher than the revised July total and \$71.1 million or 4.5 p.c. greater than the August, 1960 estimate.

The seasonally adjusted labour income total of \$1,623.2 million in August was \$5.6 million or 0.3 p.c. above the July figure. A substantial revision in the July estimates resulted from the inclusion of \$6.0 million in retroactive wage payments.

Construction wages and salaries, seasonally adjusted, advanced 1.8 p.c. from July to August. Gains were also recorded in the service industries, including government, (1.3 p.c.); manufacturing (1.0 p.c.); finance, insurance and real estate group (0.8 p.c.) and in public utilities (0.3 p.c.). Wages and salaries in trade remained unchanged from July to August.

The transportation, storage and communication group declined 2.4 p.c., however, this decrease was attributed to retroactive wage payments included in the July figure. Wages and salaries in each of the primary industries (agriculture, forestry, fishing, trapping and mining) were lower in August than in July.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-56 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-56. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explainnng what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

SEPTEMBER, 1961

Total labour income for the month of September was estimated at \$1,687.8 million, up \$20.1 million or 1.2 p.c. from the August figure and \$67.1 million or 4.1 p.c. from that for September, 1960.

Seasonally adjusted, the labour income total of \$1,621.7 million for September was \$5.6 million or 0.3 p.c. lower than the August estimate. Industrial disputes in the construction industry and temporary layoffs in manufacturing were partly responsible for the decline.

The seasonally adjusted estimate of wages, salaries, and supplementary labour income for the third quarter was \$4,866.6, up \$105.3 million or 2.2 p.c. from the second quarter total. All industries except agriculture and mining shared in this general increase. Wages and salaries in the non-government service industries increased by almost 4.0 p.c. from the second to the third quarter. Construction wages and salaries advanced 3.2 p.c. Gains of 2.2 p.c. were recorded in each of the following industries: manufacturing; finance, insurance and real estate group, and government service. The third quarter total of wages and salaries also increased in the transportation, storage and communication group (by 1.9 p.c.) and in trade (by 1.5 p.c.). Public utility wages and salaries advanced 0.6 p.c.; the figure for forestry did not change appreciably from the second to the third quarter. Wages and salaries in agriculture declined 4.8 p.c. and there was a quarter-to-quarter decrease of 0.7 p.c. in mining.

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
  - r Includes minor revisions.
  - x Includes Newfoundland since 1949.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part 1 - Definitions and Concepts. General notes explainnng what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

OCTOBER, 1961

The total amount of labour income received by paid workers in October amounted to \$1,680.7 million, according to preliminary estimates. The October total was \$80.9 million (5.1 p.c.) above the figure for October 1960. Labour income declined by \$12.7 million (0.8 p.c.) from September to October, a smaller-than-seasonal decrease.

The seasonally-adjusted Canada total for October was \$1,636.8 million, up \$9.9 million (0.6 p.c.) from the September figure. In the Atlantic Region, the month-to-month gain was 2.3 p.c.; there was a decline of 1.4 p.c. in British Columbia. Seasonally-adjusted labour income totals for the Quebec, Ontario and Prairie regions each rose by less than 1 p.c. over the month.

The seasonally-adjusted total of wages and salaries for October was estimated at \$1,553.2 million, up \$9.4 million (0.6 p.c.) from the September total. The adjusted wage and salary estimate for transportation, storage and communication declined by 0.6 p.c. over the month. Gains were recorded for all other major industries, with the increases in most cases amounting to less than 1 p.c.

Note: Labour income includes supplementary labour income (see notes for definition) as well as wages and salaries. Owing to difficulties in distributing supplementary labour income estimates industrially, the industry data in this publication cover wages and salaries only. Annual estimates of labour income by industry are published in National Accounts: Income and Expenditure.

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
  - r Includes minor revisions.
  - x Includes Newfoundland since 1949.

--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explainnng what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

NOVEMBER, 1961

Employees received an estimated total of \$1,657.2 million in the form of wages, salaries, and supplementary labour income during the month of November. This figure is \$23.8 million (1.4 p.c.) lower than the October total and \$83.5 million (5.3 p.c.) above the November, 1960 estimate.

Seasonally adjusted, the labour income estimate for November was \$1,645.6 million, up \$8.7 million (0.5 p.c.) from the October total. Most industries contributed to this increase. There was a particularly large rise in construction, where industrial disputes in Quebec were terminated in the latter half of October.

Total labour income in the first eleven months of 1961 was 3.9 p.c. higher than in the corresponding period in 1960. Wages, salaries, and supplementary labour income rose by more than 4.5 p.c. in the Atlantic and Prairie regions. The gains in Ontario and Quebec were 4.1 p.c. and 3.7 p.c. respectively. The increase in British Columbia amounted to 1.6 p.c. only, mainly because labour income in the forestry and contract construction industries was lower in 1961 than in 1960.

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1962.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
     r Includes minor revisions.  
     x Includes Newfoundland since 1949.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	14
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

### Labour Income, 1960 and 1961

Labour income rose rapidly during 1961 reflecting cyclical improvements in business conditions. From the first to the fourth quarter, the seasonally-adjusted estimates gained by 5.0 per cent, or at a rate corresponding to an annual increase of 6.6 per cent. The period of rapid growth succeeded one of smaller increases. The gain from the first quarter of 1960 to the first quarter of 1961 amounted to only 2.3 per cent. The overall increase in labour income from calendar 1960 to calendar 1961 was 4.2 per cent.

The estimated labour income total for 1961 was \$18.9 billion. This figure is about two-thirds of net national income and half of gross national product. The greater part of labour income is made up of wage and salary payments, which amounted to \$18.1 billion in 1961. Estimated supplementary labour income in that year was about \$800 million, or 4.4 per cent of the total compensation of employees.

From 1960 to 1961, wages and salaries originating in service-producing industries increased relative to wages and salaries originating in goods-producing industries, as over most previous years in the post-war period(1). In 1947, the service-producing total exceeded the wage and salary figure for goods-producing industries by 1 per cent only; the margin had increased to 30 per cent by 1960. In part, the post-war widening of the margin reflected differences in rates of gain in "labour productivity", which has increased more rapidly in goods-producing than in service-producing industries. Increasing emphasis on some service activities, particularly in the education and health fields, has also been a factor. From 1960 to 1961, wages and salaries in goods-producing industries rose by 1.4 per cent while those in service-producing industries increased by 6.4 per cent. In consequence, the margin widened further, and the wage and salary total for the service-producing industries in 1961 exceeded that for goods-producing industries by 37 per cent. Cyclical influences probably accounted for some part of the change from 1960 to 1961, and irregular occurrences may have been of consequence. However, long-run tendencies, including those mentioned above, presumably were the main factors in widening the margin.

During 1960 and the first month or two of 1961, business activity passed through the later stages of a cyclical decline that began in 1959. Conditions began to improve early in 1961, and the cyclical upswing continued through the rest of the year. The wages and salaries totals for the goods-producing group, which includes most industries that are highly sensitive to cyclical influences, reflected these changes. Real labour input for the group was probably somewhat lower in calendar 1961 than in calendar 1960, as the percentage increase in labour prices was almost certainly greater than 1.4 per cent, the estimated rise in total wages and salaries.

The following table of seasonally-adjusted quarter-to-quarter changes indicates that wage and salaries in goods-producing industries tended to decline during 1960 and into the first part of 1961. The reductions became progressively smaller, and the period of decreases was succeeded by one of substantial quarter-to-quarter gains. In service-producing industries, on the other hand, total wages and salaries increased from quarter-to-quarter at rates which showed relatively little variation over the whole 1960-61 period. Most of the industries in this group have been far less sensitive to cyclical factors than the goods-producing industries.

Service-Producing Industries ..	1.3	1.4	1.5	1.4	2.0	1.7	1.1

(1) Industries classed as "goods-producing" include manufacturing, construction, and the primary industries (agriculture, fishing and trapping, forestry, mining).

### Goods-Producing Industries

Construction and the primary industries each accounted for about one-seventh of the wage and salary payments originating in goods-producing industries during 1960 and 1961. Changes in manufacturing which paid out the remaining five-sevenths, therefore accounted for much of the variation in quarter-to-quarter wage and salary movements in the group. The following table shows quarter-to-quarter movements in seasonally-adjusted wages and salaries for the three sets of industries, and indicated that changes for each followed the business cycle fairly closely.

Percentage Changes in Seasonally-Adjusted Estimates  
of Wages and Salaries, Goods-Producing Industries, 1960-1961

	1Q'60 to 2Q'60	2Q'60 to 3Q'60	3Q'60 to 4Q'60	4Q'60 to 1Q'61	1Q'61 to 2Q'61	2Q'61 to 3Q'61	3Q'61 to 4Q'61

Primary Industries .....	-2.3	-0.2	-2.2	-1.5	0.5	-0.6	2.6

The following table of data for manufacturing gives details of quarter-to-quarter variations in estimates of total wages and salaries and numbers of employees. The latter provide a rough measure of changes in the volume of paid labour. However, they do not reflect shifts in the composition of the employee work-force or variations in numbers of hours worked per employee. These changes usually tend to offset each other except near cyclical turning points. For example, during cyclical downturns inexperienced employees are laid off first (thus tending to increase average labour input per employee) but at the same time the number of workers on short-time rises and average hours worked per week decline. This latter effect tends to decrease average labour input per employee. The table also includes indications of quarter-to-quarter changes in average weekly wages and salaries in manufacturing - a crude measure of labour price changes in this industry.

### Service-Producing Industries

Labour Force Survey data indicate an average monthly increase of less than 3 per cent in numbers of employees in service-producing industries between 1960 and 1961. This suggests that rather more than half the estimated 6.4 per cent gain in wages and salaries in this group resulted from increases in prices of purchased labour. A wage gain of 3 to 5 per cent could have been anticipated on the basis of the behaviour of general wage rate indexes, which have tended to rise fairly constantly within this range of annual gains in recent years.

The pattern of rapid growth and relative freedom from cyclical influences attributed to the service-producing industries derives from the behaviour of employment and earnings in finance, service and government. Wages and salaries originating in these industries accounted for over half the service-producing total in 1961. As indicated in the following table, increases in wages and salaries originating in this group of industries were close to 2 per cent from quarter-to-quarter throughout 1960 and 1961. Volume and price increases probably contributed about equally to the wage and salary gains.

Percentage Changes in Seasonally-Adjusted Estimates of  
Wages and Salaries, Service-Producing Industries, 1960 - 1961

	1Q'60 to 2Q'60	2Q'60 to 3Q'60	3Q'60 to 4Q'60	4Q'60 to 1Q'61	1Q'61 to 2Q'61	2Q'61 to 3Q'61	3Q'61 to 4Q'61
Service-Producing .....	1.3	1.4	1.5	1.4	2.0	1.7	1.1
Finance, Service and Government	1.8	2.3	2.4	2.0	2.4	2.2	1.8
Trade .....	1.1	0.8	0.8	0.7	1.1	1.4	0.6
Transportation, Communication, and Other Utilities .....	0.4	0.1	-	0.8	2.2	1.1	-

Trade has shown somewhat the same pattern of development as finance, service and government, but gains in wages and salaries during 1960 and 1961 were moderate, and may be attributed mainly to increases in labour prices. The pattern of steady non-cyclical growth has not been characteristic of transportation and some other "utility" industries. Although they are "service-producing", they have strong ties with developments in goods-producing industries because a major part of their activities consists of serving those industries, rather than in supplying consumers with services directly. In addition, opportunities for gains in labour productivity in some of the utilities industries appear to have been as great as in goods-producing industries. Quarter-to-quarter changes in wages and salaries originating in transportation, communication and other utilities to some extent reflected these factors. However, the data are distorted because substantial payments respecting railway wage-rate increases applying as of dates in 1960 and early 1961 were not made until the second and third quarters of 1961. Had these payments been distributed over the months to which they applied, the quarter-to-quarter increases for 1961 would all have been close to 1 per cent, and somewhat smaller increases would have been recorded from quarter to quarter in 1960.

The current issue of Estimates of Labour Income includes all data on the subject available for 1957 and later years, except for a few special tables which may be found in recent issues of National Accounts, Income and Expenditure. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

JANUARY, 1962

Canadian employees received an estimated total of \$1,566.3 million in the form of wages, salaries, and supplementary labour income for the month of January. This figure is \$19.5 million (1.2 p.c.) lower than the December, 1961 total and \$99.7 million (6.8 p.c.) above the January, 1961 estimate.

The year-over-year percentage increases in Quebec (7.9 p.c.) and Ontario (7.1 p.c.) were larger than the average for the nation as a whole. The increases for the Atlantic region and British Columbia were both 5.7 p.c. and the gain for the Prairie region amounted to 5.4 p.c.

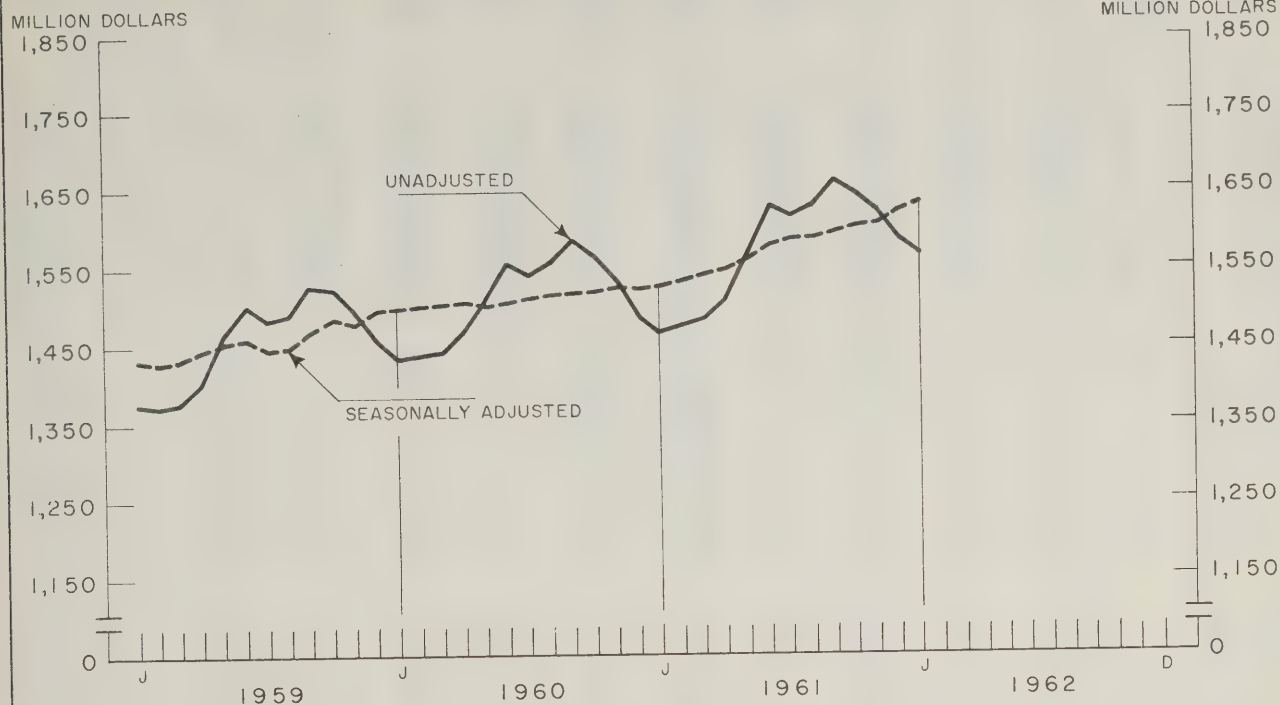

Seasonally adjusted, the total labour income estimate of \$1,631.5 million for January was \$9.1 million or 0.6 p.c. above the December, 1961 figure. The provinces in which the largest gains occurred were British Columbia (1.2 p.c.) and Quebec (1.0 p.c.). Labour income in Ontario advanced 0.4 p.c. from December to January. In the Prairie region, where minor declines were evident in the latter part of 1961, there was no change from December to January. A month-to-month decline of 0.3 p.c. was recorded for the Atlantic Region.

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
  - (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
  - (3) Includes post office wages and salaries.
  - (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
  - (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

FEBRUARY, 1962

The total of wages, salaries, and supplementary labour income was estimated at \$1,575.7 million for the month of February, up \$10.0 million or 0.6 p.c. from the revised January figure.

The labour income estimate for February 1962 was \$101.1 million (6.9 p.c.) above the figure for February 1961. Year-over-year gains were close to the national average in all regions, varying between 5.8 p.c. in the Prairie Provinces and 7.7 p.c. in Quebec.

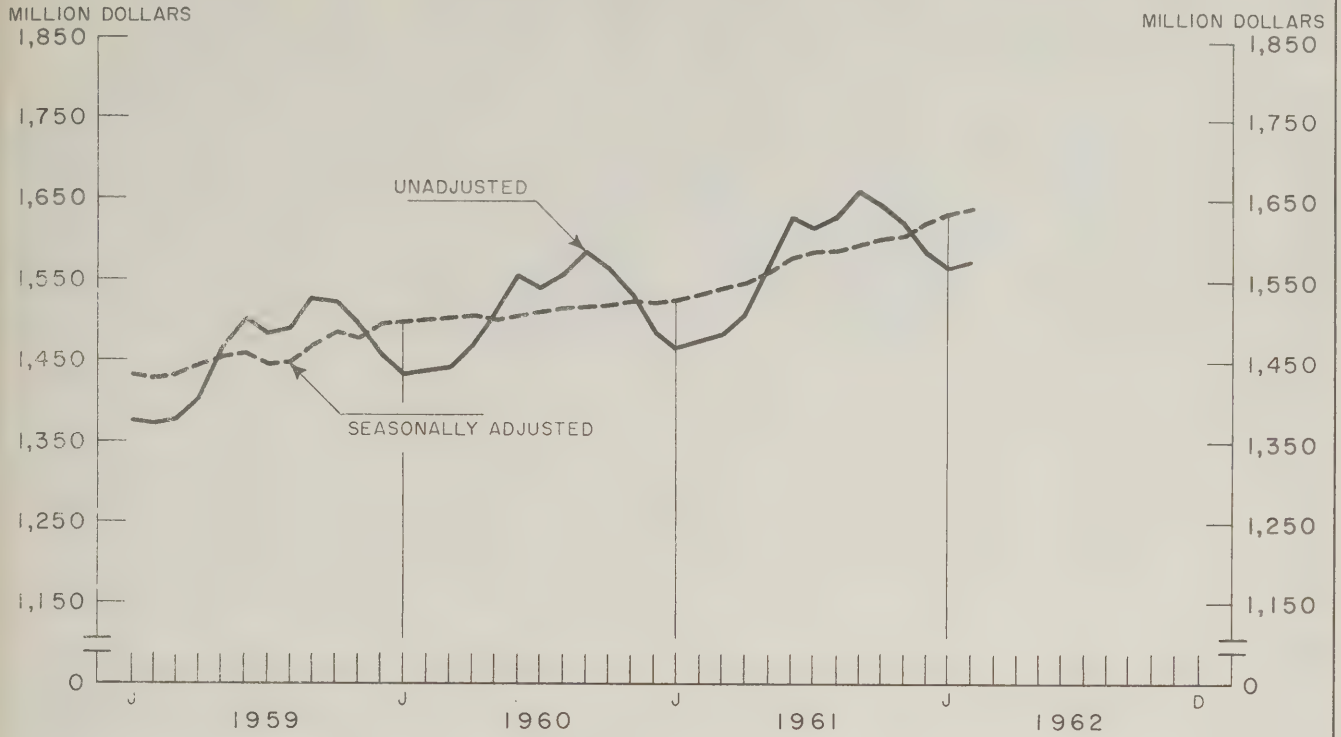

The seasonally-adjusted labour income total for February was estimated at \$1,639.6 million. This figure is \$8.9 million or 0.5 p.c. greater than the January total. Moderate month-to-month increases occurred in all regions.

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
  - 1 Includes minor revisions.

 EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

### FIRST QUARTER, 1962

Labour income, which entered into a period of rapid increase early in 1961, continued to show larger-than-usual gains through the first quarter of 1962. Recent strength is associated with cyclical improvement of business conditions. Seasonally-adjusted, the labour income gain from the fourth quarter of 1961 to the first quarter of 1962 amounted to 1.9 per cent, an increase slightly larger than those recorded from quarter to quarter in 1961. It appears that labour prices have tended to rise by approximately 1 per cent from quarter to quarter over most recent periods, so increases in volume of labour input may have accounted for about half of each quarter-to-quarter gain in labour income recorded since the beginning of 1961.

In recent years, labour income originating in goods-producing industries has tended to rise less rapidly than labour income originating in service-producing industries. However, during some stages of cyclical upswings the goods-producing estimates have shown the larger increases owing to the special sensitivity of these industries to cyclical influences. The economy appears to have been going through such a stage of the cycle in the winter of 1961-62, with quarter-to-quarter gains in the seasonally-adjusted wage and salary estimates for the goods-producing segment exceeding those for the service-producing segment both between the third and fourth quarters of 1961 and between the latter quarter and the first quarter of 1962. The quarter-to-quarter gains most recently recorded amounted to 2.3 per cent for the goods-producing industries and 1.6 per cent for the service-producing industries. (These wage and salary data cover by far the greater part of labour income; the full totals are not available by industry on a quarterly basis.)

Within the goods-producing segment, manufacturing showed a smaller gain (1.3 per cent) than over immediately preceding quarters. Movements in employment indexes suggest that the reduced rate of gain in wages and salaries was associated with a declining rate of increase in numbers of employees. On the other hand, the percentage increases in construction (5.6 per cent) and the primary industries (3.7 per cent) were the largest quarter-to-quarter gains in those industries recorded for several years.

In the service-producing industries, the finance, service and government group continued to show the largest percentage gains through the first quarter of 1962. The seasonally-adjusted estimates for this group have consistently risen by about 2 per cent from quarter to quarter in recent years. Wages and salaries rose more than 1 per cent from the fourth quarter of 1961 to the first quarter of 1962 both in trade and in the transportation, communication and other utilities group.

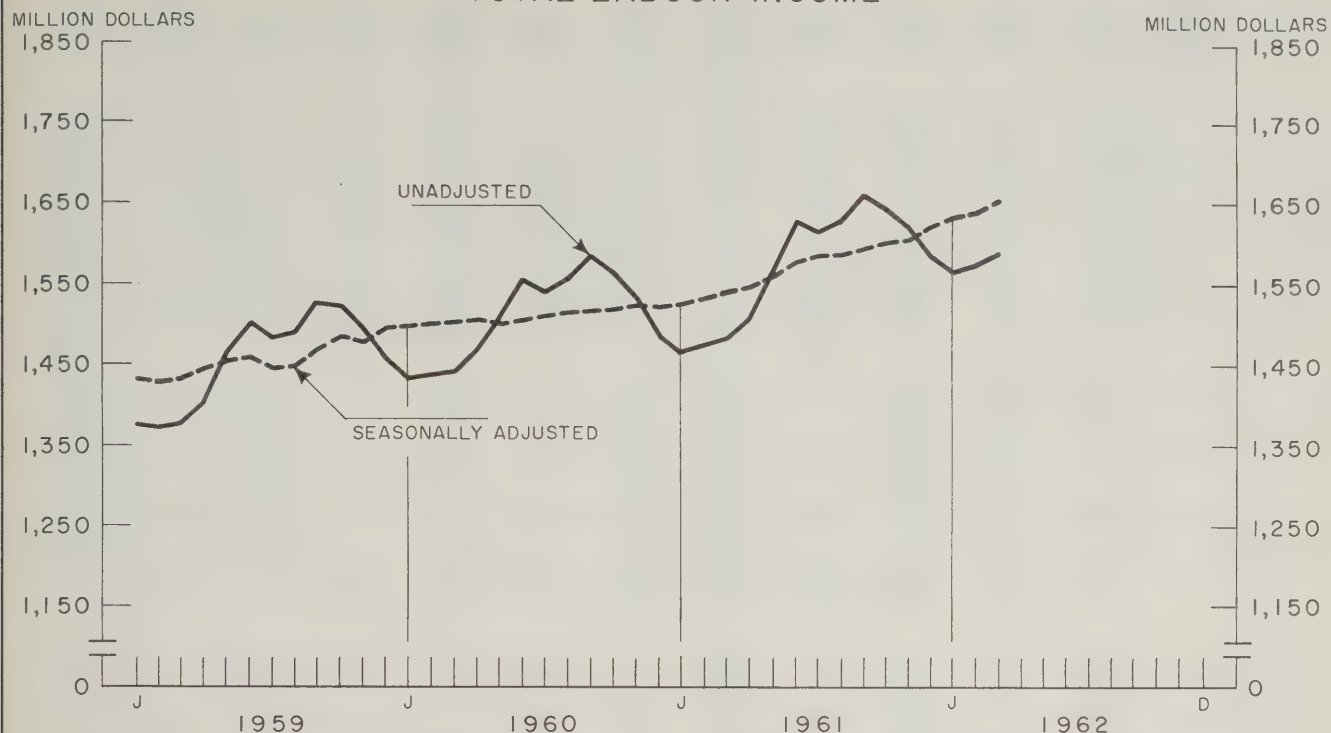

Regionally, there has been no obvious pattern in the relative size of gains as between different parts of Canada during the last year. From the fourth quarter of 1961 to the first quarter of 1962, Quebec showed the largest gain (2.9 per cent), but this region had the smallest gain from the second to the third quarter of 1961. The most recent quarter-to-quarter data indicate increases exceeding 2 per cent in Ontario and British Columbia (as well as in Quebec). The increases for the Atlantic and Prairie Regions amounted to 1.1 per cent and 0.6 per cent respectively. In the early part of 1961, percentage increases in the Prairie Region were larger than those in other regions.

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
    <sup>r</sup> Includes minor revisions.

## TABLE OF CONTENTS

	<u>Page</u>
COMMENTS .....	3
SUMMARY TABLE .....	4
 <u>CHARTS</u>	
1. Total labour income .....	5
2. Manufacturing wages and salaries .....	5
 <u>TABLES</u>	
1. Wages and salaries by industry, and supplementary labour income, Canada .....	6
2. Wages and salaries by industry, and supplementary labour income, Canada, adjusted for seasonal variation .....	7
3. Labour income by province or region .....	8
4. Labour income by province or region, adjusted for seasonal variation ...	9
5. Wages and salaries in manufacturing by province or region .....	10
6. Wages and salaries in manufacturing by province or region adjusted for seasonal variation .....	11
EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part 1 - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

APRIL, 1962

Total labour income in April was estimated at \$1,613.2 million. Seasonal influences were the main factor in the increase of \$22.7 million (1.4 p.c.) occurring from March to April.

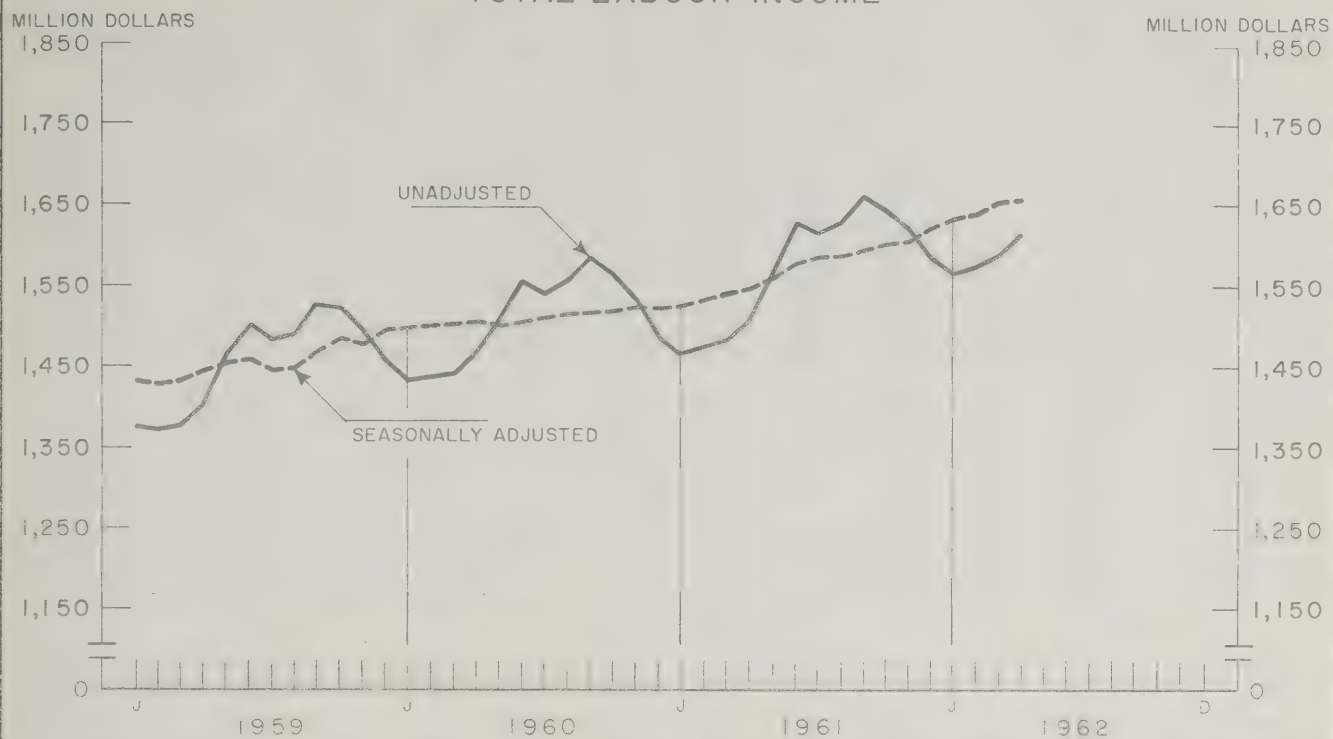

Seasonally adjusted, the labour income total rose \$1.1 million (0.1 p.c.) over the month. Increases recorded in the Atlantic, Ontario and Prairie regions were sufficient to offset declines in Quebec and British Columbia. The accumulated increases over the first four months of 1962, with corresponding figures for 1961 shown in brackets, were as follows: Canada 2.0 p.c. (1.7 p.c.); Atlantic region 2.7 p.c. (1.7 p.c.); Quebec 1.6 p.c. (1.5 p.c.); Ontario 2.3 p.c. (1.6 p.c.); Prairie region 2.4 p.c. (2.2 p.c.); British Columbia 1.0 p.c. (1.2 p.c.).

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

 EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

MAY, 1962

Labour income in May amounted to \$1,674.4 million, according to preliminary estimates. The May total exceeded the revised April figure by \$55.6 million or 3.4 per cent.

The seasonally-adjusted labour income estimate for May was \$1,668.8 million. The gain from April to May amounted to \$7.7 million, or 0.5 per cent.

In the twelve-month period ending in May 1962, wages and salaries in manufacturing rose by \$40.7 million, or 9.3 per cent. The following table gives details of changes in the seasonally-adjusted manufacturing wage and salary totals by region over the period.

Manufacturing wages and salaries account for almost 30 per cent of total labour income.

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds; etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

ESTIMATES OF LABOUR INCOME

Quarter-to-Quarter Changes in Seasonally-Adjusted Estimates

The seasonally-adjusted labour income estimate for the second quarter of 1962 was 1.6 per cent higher than the corresponding figure for the first quarter of the year. This rise was slightly smaller than that occurring between the fourth quarter of 1961 and the first quarter of 1962, which amounted to 1.9 per cent. Both these quarterly increases were larger than the average for the past decade, as were preceding quarterly gains back to the beginning of 1961. It appears that increases in volume and in price of labour inputs both contributed to the first-to-second quarter rise in labour income.

The wage and salary estimate for the second quarter was also 1.6 per cent higher than the corresponding first-quarter figure. The gain for the goods-producing industries amounted to 2.0 per cent, and the rise for the service-producing industries was 1.2 per cent. In both segments, the increases were slightly smaller than those occurring over the previous quarter. The seasonally-adjusted total for goods-producing industries continued to rise more rapidly than the corresponding figure for service-producing industries, as has been usual during business-cycle upswings except in the first few months of advance.

Transportation, Communication and other utilities .....	-	0.8	2.2	1.1	-	1.2	- 0.1	12.3

The quarter-to-quarter gain in manufacturing was 2.5 per cent, the second largest recorded since 1956. Nevertheless, the 2.0 per cent rise for the goods-producing industries fell short of the 2.4 per cent gain occurring between the fourth quarter of 1961 and the first quarter of 1962 owing to developments in construction and the primary industries. Marked wage-and-salary increases had occurred in both these areas over the previous quarter. The second quarter estimates indicated a reduced rate of gain in construction, and a decline in total wages and salaries originating in primary industries.

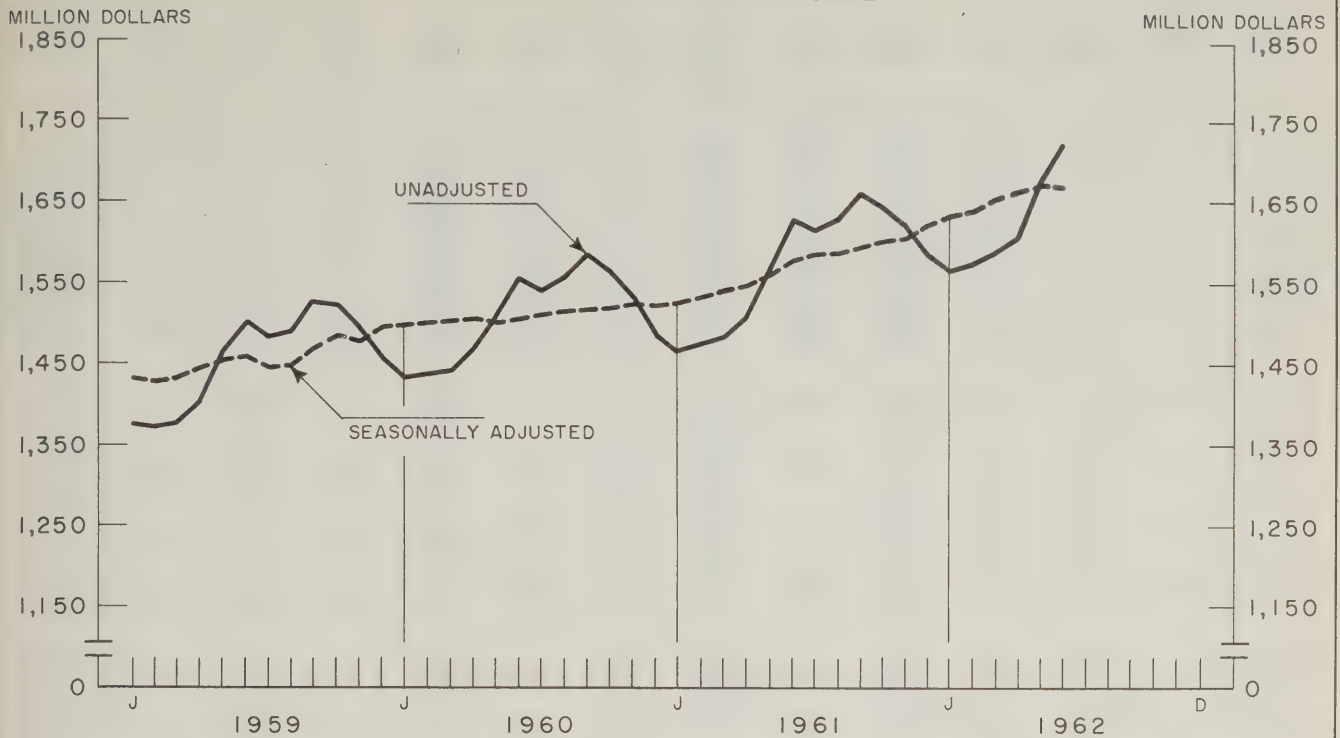

The first to second quarter increase in the service-producing industries was 1.2 per cent. Over the previous quarter, the gain had been 1.6 per cent, a figure equal to the average for the last ten years. A reduced rate of gain for the large finance, service and government grouping was partly responsible for the change. The 1.4 per cent rise for this grouping was small in comparison with those recorded from quarter to quarter in 1960 and 1961, and one of the smallest for recent years. However, the first-to-second quarter gain in trade was 2.1 per cent, one of the largest quarterly increases for this industry since 1957. Wages and salaries in transportation, communication and other utilities (which have tended to move erratically from quarter to quarter) did not increase from the first to second quarter of 1962, partly because of industrial disputes in trucking.

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

3. Labour income by province or region .....	8
4. Labour income by province or region, adjusted for seasonal variation ...	9
5. Wages and salaries in manufacturing by province or region .....	10
6. Wages and salaries in manufacturing by province or region adjusted for seasonal variation .....	11

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

July 1962

The July total of labour income was estimated at \$1,711.0 million. From June to July, labour income declined by \$15.2 million, or 0.9 per cent.

The seasonally-adjusted labour income estimate for July was \$1,678.3 million. The gain from the previous month amounted to \$7.2 million, or 0.4 per cent. The termination of industrial disputes in trucking during July was a factor in this increase. Gains in Ontario (0.4 per cent) and British Columbia (2.3 per cent) outweighed declines in the Atlantic Region (- 0.3 per cent), the Prairie Region (- 0.4 per cent) and Quebec (- 0.5 per cent).

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

# ESTIMATES OF LABOUR INCOME

AUGUST 1962

Monthly estimates of labour income for the individual Atlantic and Prairie provinces are published for the first time in this issue. The attached Supplement provides historical data for these provinces monthly from 1947 to 1958.

Published by Authority of  
The Honourable George Hees, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS

Labour Division

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

### Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

AUGUST 1962

Monthly labour income estimates for the individual Atlantic and Prairie provinces are being published for the first time in this issue of Estimates of Labour Income. Tables 3 and 4 include data for recent years. Monthly estimates for the years 1947 to 1958 are presented in an attached supplement.

Between July and August, labour income increased by \$13.4 million, or 0.8 per cent according to preliminary estimates. The August labour income total was \$1,724.9 million. The seasonally-adjusted estimate for August was \$1,681.6 million, up 0.2 per cent from the revised July figure of \$1,678.6 million.

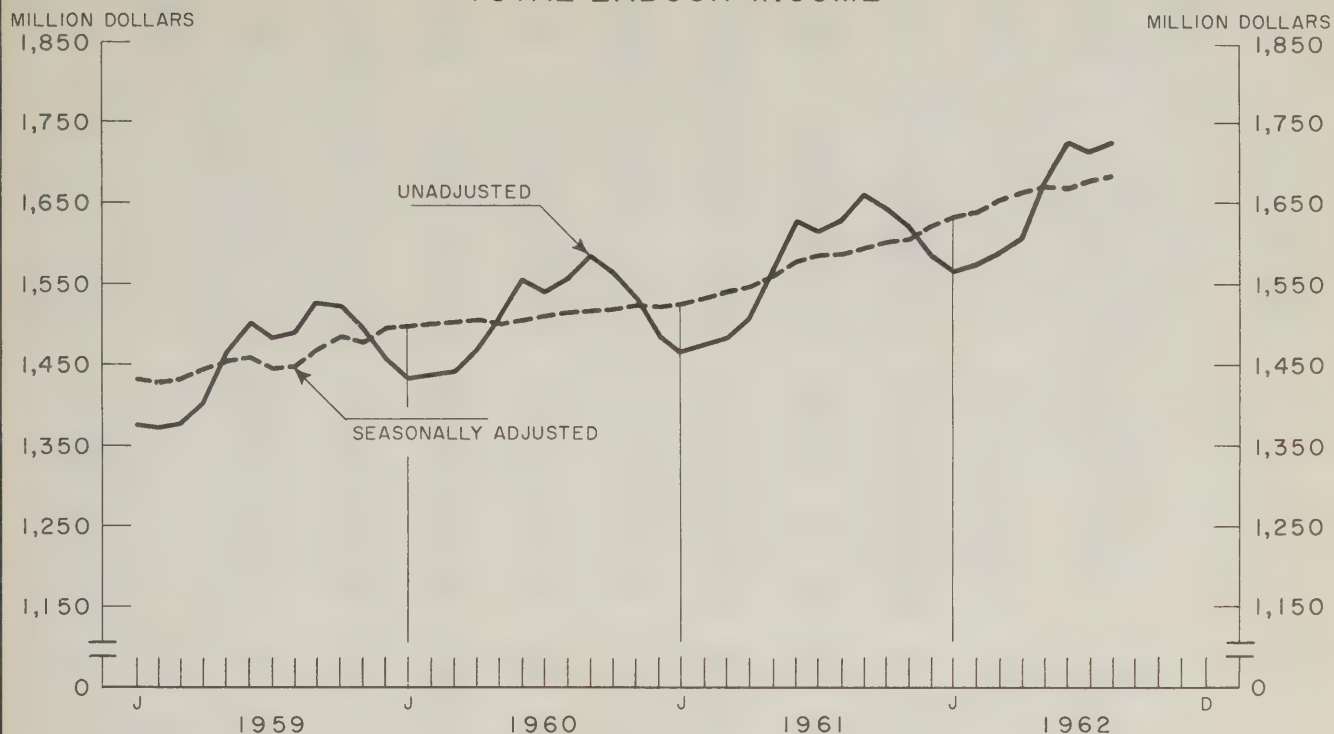

Over the month, labour income rose less than seasonally in New Brunswick, Saskatchewan and Ontario. There was no change in the seasonally-adjusted figure for British Columbia. Seasonally-adjusted estimates for the remaining provinces rose from July to August.

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

ESTIMATES OF LABOUR INCOME  
AUGUST 1962  
(SUPPLEMENT)

*Published by Authority of*  
The Honourable George Hees, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS  
Labour Division

November 1962  
8001-503

FOOTNOTE

- (1) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.

## ESTIMATES OF LABOUR INCOME

AUGUST 1962

(SUPPLEMENT)

Monthly estimates of labour income for the individual Atlantic and Prairie provinces are now being published for the first time. The increase in enquiries for these figures is considered sufficient to warrant their publication. As noted in previous publications, estimates for the smaller provinces tend to be somewhat less reliable than the data for the larger provinces or the totals for the Atlantic and Prairie regions.

The August issue of Estimates of Labour Income contains monthly data for the smaller provinces for the last few years. These data will be regularly included in Table 3 (unadjusted figures) and Table 4 (seasonally-adjusted estimates) in future months.

This Supplement gives historical figures for the period January 1947 to December 1958. Table 1 in the Supplement includes monthly labour income data not only for the individual Atlantic and Prairie provinces, but also for the Atlantic, Prairie, Quebec, Ontario and British Columbia regions, together with Canada totals. Table 2 in the Supplement gives the same data seasonally adjusted.

Users of labour income estimates who have a copy of the basic reference document Labour Income, 1926-58 may wish to file this Supplement with it. Tables 1 and 2 of the Supplement replace Tables 10 and 11 of the reference document. The 1957 and 1958 data in Labour Income, 1926-58 are unrevised figures; all the data in the Supplement are revised estimates.

 EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

# ESTIMATES OF LABOUR INCOME

## Quarter-to-Quarter Changes in Seasonally-Adjusted Estimates

The seasonally-adjusted estimate of labour income rose by 0.7 p.c. from the second to the third quarter of 1962. The increase was the smallest quarter-to-quarter rise recorded since 1960.

The seasonally-adjusted estimate of wages and salaries also rose by 0.7 p.c. from the second to the third quarter of the year. In the previous ten years, gains as small as this had been associated with declines in wages and salaries in the goods-producing industries. However, from the second to third quarter of 1962, the figure for these industries advanced by 0.5 p.c. The moderate size of the overall wage and salary gain in part reflects an unusually small rise in the service-producing industries. The gain of 0.9 p.c. in this area, although significant, was one of the smallest for the last decade. The relatively small size of the gain in part reflected the stability of the seasonally-adjusted wage-and-salary total for government service, which in most recent years has shown substantial gains from quarter to quarter.

Precise information on the influence of labour price increases on labour income is not available. However, it is known that some wage-rate increases occurred in the summer months. Taking these into account, the fact that wages and salaries in goods-producing industries rose by only 0.5 p.c. suggests that there was little increase in the volume of labour used in this segment of the economy.

## SEASONALLY-ADJUSTED ESTIMATES OF WAGES AND SALARIES, CANADA, 1960-62 QUARTER-TO-QUARTER PERCENTAGE CHANGES

	3Q'60 to 4Q'60	4Q'60 to 1Q'61	1Q'61 to 2Q'61	2Q'61 to 3Q'61	3Q'61 to 4Q'61	4Q'61 to 1Q'62	1Q'62 to 2Q'62	2Q'62 to 3Q'62	% of Total Wages and Salaries 1961
All Industries .....	0.5	0.8	1.8	1.7	1.4	1.9	1.6	0.7	100.0
<u>Goods-producing industries</u> .....	- 0.7	- 0.1	1.5	1.7	1.9	2.4	2.1	0.5	42.2
Manufacturing .....	- 0.1	0.5	1.9	2.4	1.9	1.3	2.6	1.2	29.6
Construction .....	- 2.2	- 1.2	0.6	0.6	0.9	5.9	2.6	- 3.2	6.8
Primary industries .....	- 2.2	- 1.5	0.5	- 0.6	2.6	3.7	- 1.0	1.1	5.8
<u>Service-producing industries</u> .....	1.5	1.4	2.0	1.7	1.1	1.6	1.2	0.9	57.8
Finance & Non-government Service ..	2.2	2.1	3.0	2.4	1.8	1.7	1.2	1.4	20.6
Trade .....	0.8	0.7	1.1	1.4	0.6	1.5	2.1	0.8	15.2
Transportation, Communication and other utilities .....	-	0.8	2.2	1.1	-	1.2	-	0.8	12.3
Government Service .....	2.9	2.0	1.2	1.6	1.8	2.2	1.5	- 0.1	9.7

While there was evidently no significant increase in the overall utilization of labour resources in the goods-producing industries, the fact that wages and salaries gains slightly exceeding 1 p.c. occurred both in the manufacturing and in the primary industries suggests some increase in volume of labour input in these industries. Seasonally-adjusted, wages and salaries originating in construction declined by an estimated 3.2 p.c. This is a fairly clear indication of significant declines in the volume of labour used by the industry; as usual, the initial wage and salary figures for this erratic industry should be treated with caution, and the estimate of the quarter-to-quarter change may be revised as more data become available.

Gains in trade and transportation, communication and other utilities approximated the overall gain of 0.9 p.c. estimated for the service-producing sector as a whole. The 0.8 p.c. rise for trade was down sharply, as a rise of 2.1 p.c. occurred from the first to second quarter. Wages and salaries in government service did not change significantly over the quarter, as previously noted. However, the figure for finance and non-government service continued to climb, with combined wages and salaries for these two industry divisions gaining by 1.4 p.c. between the second and third quarters of the year.

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- <sup>r</sup> Includes minor revisions.

 EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part 1 - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

### Estimates of Labour Income

October 1962

Total labour income for the month of October was estimated at \$1,734.6 million, a decline of \$14.6 million or 0.8 p.c. from the revised September figure.

The seasonally-adjusted labour income total of \$1,688.7 million was \$8.8 million or 0.5 p.c. higher than the September estimate. About \$3.0 million of this increase was attributed to retroactive wage payments in the transportation and public utility industries. Retroactive wage payments in the public utility industry were concentrated in the province of Ontario.

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

\* The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

SUMMARY TABLE .....	4

### CHARTS

1. Total labour income .....	5
2. Manufacturing wages and salaries .....	5

### TABLES

1. Wages and salaries by industry, and supplementary labour income, Canada .....	6
2. Wages and salaries by industry, and supplementary labour income, Canada, adjusted for seasonal variation .....	7
3. Labour income by province or region .....	8
4. Labour income by province or region, adjusted for seasonal variation ...	9
5. Wages and salaries in manufacturing by province or region .....	10
6. Wages and salaries in manufacturing by province or region adjusted for seasonal variation .....	11

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

NOVEMBER 1962

The total of wages, salaries, and supplementary labour income for the month of November was \$1,713.1 million. This figure was \$21.6 million or 1.2 per cent lower than the revised October estimate.

The seasonally-adjusted total of labour income was \$1,694.2 million, an increase of \$5.1 million or 0.3 per cent from the October total. Percentage gains in Alberta (1.1 per cent), Ontario (0.9 per cent) and British Columbia (0.6 per cent) were larger than the advance in the national figure. Labour income in Prince Edward Island, New Brunswick, Quebec and Saskatchewan remained at about the same level as in October. Declines were recorded in Newfoundland (- 3.1 per cent), Nova Scotia (- 1.4 per cent) and Manitoba (- 0.5 per cent).

## Percentage Changes in Monthly and Quarterly Estimates

D.													

The current issue of Estimates of Labour Income includes all data for 1958 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1963.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part 1 - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## Labour Income, 1962

In 1962, annual labour income rose above \$20 billion for the first time. The estimated total of \$20,359 million was 6.8 per cent higher than the figure for 1961. The percentage gain was the largest since that which occurred from 1956 to 1957. The wages and salaries component of labour income accounted for 95.7 per cent of the total in 1962 and the rise in this component paralleled that in overall labour income. Increases in volume of labour inputs and increases in labour prices both contributed substantially to the rise in the wage and salary figure.

Wages and salaries rose more rapidly in the early months of 1962 than in the latter part of the year. The estimated rise in the seasonally-adjusted figure between the fourth quarter of 1961 and the first quarter of 1962 was 2.1 per cent. From the third to fourth quarter, wages and salaries increased by 1.1 per cent (i.e. at an annual rate of 4.4 per cent). Labour price increases were probably the main factor in the third-to-fourth quarter rise.

In 1962, 42.2 per cent of total wages and salaries originated in goods-producing industries and the remaining 57.8 per cent in service-producing industries. At the beginning of the post-war period, the contribution of the two segments to the total was about the same. The change reflects a long-term tendency for wage and salary totals to rise more rapidly in the service-producing than in the goods-producing segment of the economy. The relationship between size of quarter-to-quarter increase in the two segments has varied considerably over the short run, largely owing to cyclical factors. In general, the goods-producing industries are more responsive to cyclical influences than are the service-producing industries. In consequence, the goods-producing total has tended to rise more rapidly than the service-producing total during the most rapid stage of expansion during business-cycle upswings. The Canadian economy entered such a stage towards the end of 1961, and the goods-producing total moved ahead more rapidly than the service-producing total for several quarters. As the upswing became less vigorous, the increases in the goods-producing industries dropped off sharply, while those for service-producing industries subsided only moderately. The following table shows quarter-to-quarter changes in wage and salary totals over the last two years.

In the early part of 1962, wages and salaries were rising faster in construction than in any other groups of industries for which data are given in the table, and the rate of increase for primary industries was amongst the highest. In contrast, from the third to fourth quarter the rise in construction was the smallest for any of the industries showing increases, while wages and salaries in the primary industries declined substantially. These two industry groupings together account for less than one-third the total of wages and salaries originating in goods-producing industries. The greater part of the total originates in manufacturing, where the rate of increase showed relatively little decline during the year.

Wages and salaries in the finance and service group have risen at a steady and rapid rate in recent years, and this has been a major factor in the rapid increases in wages and salaries for the service-producing segment as a whole. With scattered exceptions, the quarter-to-quarter gains for finance and service recorded in the last decade have exceeded 2 per cent. This pattern of steady and substantial increase continued through 1962. Increases in the remaining industry groups in the service-producing segment were smaller than those in the finance and service group throughout the year.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

JANUARY 1963

Total labour income in January rose to a total of \$1,701.0 million, an increase of \$8.5 million or 0.5 per cent from the December 1962 figure. The January total includes \$16.8 million in retroactive wage payments received by federal government employees.

The seasonally-adjusted total of labour income for January, estimated at \$1773.1 million, was \$43.0 million, or 2.5 per cent, higher than the December 1962 total. Over the month, labour income in Prince Edward Island, Nova Scotia, New Brunswick and British Columbia showed larger percentage increases than the national figure. Gains of about 2.5 per cent were recorded in Ontario and Alberta, while Quebec and Manitoba were up about 2 per cent. The increases in Newfoundland (1.0 per cent) and Saskatchewan (1.1 per cent) were smaller than those occurring in other provinces.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

 EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

FEBRUARY 1963

The February total of wages, salaries, and supplementary labour income was estimated at \$1,698.6 million, a decline of \$0.8 million from the revised January figure. The January total included \$16.8 million in retroactive wage payments made to federal government employees.

Total labour income, adjusted for seasonal variation, was estimated at \$1,767.7 million for February. This figure was \$3.7 million or 0.2 p.c. lower than the revised January total. Changes of 0.5 p.c. or less were recorded in most provinces from January to February. The January figure for Ontario, where a large proportion of federal government workers are employed, included almost one-half of the retroactive wage payments mentioned above.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
r Includes minor revisions.

 EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part 1 - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

# ESTIMATES OF LABOUR INCOME

## Quarter-to-Quarter Changes in Seasonally-Adjusted Data

The seasonally-adjusted labour income estimate for the first quarter of 1963 was 2.6 per cent higher than the corresponding estimate for the fourth quarter of 1962. The wage and salary estimate rose by about the same percentage.

About one-fifth of the overall quarter-to-quarter increase reflected retroactive payments of wages and salaries by the Federal Government. Adjusted for these, the quarter-to-quarter rise in the wage and salary total would have amounted to 2.3 per cent.

Quarter-to-quarter increases exceeding 2.3 per cent have been infrequent. Since 1956 (a year of rapid increase), only two have been recorded. Both occurred in 1959; and both would have been smaller but for the effects of special factors, which included retroactive wage payments and the conclusion of industrial disputes.

The fourth-to-first quarter rise for the goods-producing industries amounted to 2.2 per cent. When large increases in overall wages and salaries have occurred in recent years, the figure for goods-producing industries has normally risen more than that for service-producing industries. This was not the case in the most recent comparison. The figure for service-producing industries would have risen by 2.4 per cent had no retroactive payments to federal employees been made; the actual rise amounted to 3.0 per cent.

The following table gives details of recent quarter-to-quarter changes in wage and salary totals for the goods-producing sector, the service-producing sector, and a number of their components. Each series shows a larger gain from fourth to first quarter (1962-63) than over the previous quarter.

Wages and salaries in the primary industries, construction and trade rose from the fourth to first quarter by exceptionally large percentages, considering previous experience over the period from 1956 to date. The gain for government (non-military) was also large, but the rise for this industry would have been unexceptional had no retroactive wage payments been made. Increases for the remaining components, although substantial, were not unusually large in relation to some of those previously recorded in the last six years.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

APRIL 1963

Wages, salaries, and supplementary labour income rose to an estimated total of \$1,744.6 million for the month of April. This figure is \$30.0 million or 1.7 p.c. above the revised March total.

Seasonally adjusted labour income was estimated at \$1,787.3 million for April; an increase of \$8.9 million or 0.5 p.c. from the March figure. Wages, salaries, and supplementary labour income in Prince Edward Island was higher by 2.1 p.c. while Newfoundland, Quebec, Ontario and Manitoba each had a gain of about 1.0 p.c. Nova Scotia increased 0.6 p.c. from March to April. A slight decline of 0.2 p.c. was recorded for labour income in Saskatchewan. Decreases of about 1.0 p.c. occurred in Alberta and British Columbia. The New Brunswick total of labour income was lower by 1.9 p.c. in April when compared with the March total.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

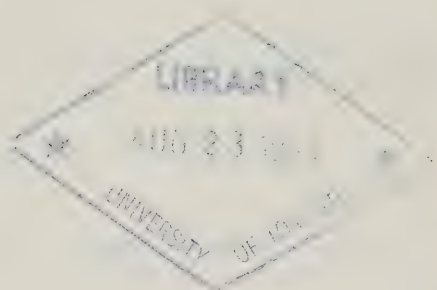

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

COMMENTS .....	3
SUMMARY TABLE .....	4
 <u>CHARTS</u>	
1. Total labour income .....	5
2. Manufacturing wages and salaries .....	5
 <u>TABLES</u>	
1. Wages and salaries by industry, and supplementary labour income, Canada .....	6
2. Wages and salaries by industry, and supplementary labour income, Canada, adjusted for seasonal variation .....	7
3. Labour income by province or region .....	8
4. Labour income by province or region, adjusted for seasonal variation ...	9
5. Wages and salaries in manufacturing by province or region .....	10
6. Wages and salaries in manufacturing by province or region adjusted for seasonal variation .....	11
 EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

- Part 1 - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.
- Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

MAY 1963

The preliminary estimate of wages, salaries, and supplementary labour income for May was \$1,805.2 million. The increase from April to May amounted to \$58.4 million or 3.3 p.c..

Total labour income, seasonally adjusted, was estimated at \$1,791.9 million for May. This figure was \$2.1 million or 0.1 p.c. above the revised April total. This month-to-month increase was the smallest yet recorded in 1963. Labour income advanced by about 1.0 p.c. in both Newfoundland and British Columbia. The Manitoba figure was up 0.5 p.c. from the April total while there were increases of 0.3 p.c. in Quebec and Alberta.

The May estimates for Prince Edward Island and Ontario were about the same as the April figures. Decreases in total labour income of about 0.7 p.c. were recorded for New Brunswick and Saskatchewan. The Nova Scotia total declined by 3.2 p.c. from April to May.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
r Includes minor revisions.

--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

# ESTIMATES OF LABOUR INCOME

JUNE 1963

## Quarter-to-Quarter Changes in Seasonally-Adjusted Data

Labour income rose by 1.1 per cent from the first to the second quarter of 1963, exclusive of increases occasioned by seasonal factors. The overall wages and salaries aggregate rose by a like percentage, as did the wage and salary totals for the goods-producing and service-producing segments of the economy. Substantial retroactive wage and salary payments had been made during the first quarter, mainly to federal employees. But for these payments, the first-to-second quarter increase for the economy as a whole would have amounted to 1.4 per cent and that for the service-producing segment would have been 1.8 per cent. Gains in labour prices and in the volume of labour inputs were probably of about equal importance in the increase in the overall wage and salary aggregate.

The pattern of quarter-to-quarter increases in wages and salaries since early 1961 has been fairly consistent from industry to industry, as indicated by the following table. Most industries showed above-average gains through 1961 and into the second quarter of 1962. Somewhat smaller gains occurred from the second to third quarter of 1962, and again from the third to fourth quarter. The situation strengthened considerably between the fourth quarter of 1962 and the first quarter of 1963, when one of the largest quarter-to-quarter gains in recent years was recorded. The first-to-second quarter gain was about average for the last decade.

Between the first and second quarters of 1963, the wage and salary figure for manufacturing increased by 1.6 per cent, a rise equalling that from the first to second quarter. The increase for the non-durables segment appeared to be the largest for any quarter in the last three years, but the gain for durables was the smallest for that period. In construction, there was a minor decline over the quarter; the erratic wage and salary total for primary industries rose by a small amount.

Wages and salaries originating in finance and service, the largest industry group in the service-producing segment of the economy, rose by 2.4 per cent from the first to the second quarter, on a seasonally-adjusted basis. This industry group was the only one showing an increase exceeding 2 per cent. Quarter-to-quarter gains of 2 per cent or more have been recorded for the group over all but three quarters since 1955. The gain for trade amounted to 1.5 per cent. The continuance of the downward trend in railway employment accounted in part for the small size of the wage and salary increase (0.7 per cent) in transportation, communication and other utilities. The decline in the seasonally-adjusted figure for government (non-military) reflects the large retroactive wage payments made to federal employees in the first quarter. But for these payments, the wage and salary figure for the industry would have risen by 2.2 per cent from the first to second quarter.

## Seasonally-Adjusted Estimates of Wages and Salaries, Canada, 1961-63

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- <sup>r</sup> Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12
--	----

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

JULY 1963

Total labour income for the month of July was estimated at \$1,830.2 million. This total was \$32.8 million or 1.8 p.c. lower than the revised June figure.

The seasonally adjusted total of wages, salaries, and supplementary labour income for July amounted to \$1,799.5 million. This estimate was almost identical with the revised June total.

Total labour income advanced from June to July in Quebec (1.0 p.c.) and Manitoba (0.2 p.c.). Declines in total wages, salaries, and supplementary labour income were evident in Saskatchewan (- 0.2 p.c.); New Brunswick (- 0.3 p.c.); Ontario (- 0.5 p.c.); Alberta (- 0.8 p.c.); British Columbia (- 2.1 p.c.) and Newfoundland (- 4.2 p.c.). Labour income totals in Prince Edward Island and Nova Scotia did not change from June to July.

Industrial disputes which affected both the fishing and manufacturing industries, accounted for a part of the decline in labour income in British Columbia.

For footnotes (1) to (5) and symbols, see page 12.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- <sup>r</sup> Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

AUGUST 1963

The August total of wages, salaries, and supplementary labour income was estimated at \$1,870.8 million. This figure was \$40.2 million (2.2 p.c.) above the revised July total. Retroactive wage payments of \$13.5 million were made to federal government employees in August.

The seasonally-adjusted labour income estimate for August was \$1,826.9 million. The total advanced \$26.8 million or 1.5 p.c. from July to August. The retroactive wage payments mentioned above accounted for about one-half of this increase.

Increases in total labour income from July to August were recorded in Alberta (0.6 p.c.); Manitoba (0.7 p.c.); Quebec (0.8 p.c.); New Brunswick and Ontario (1.6 p.c.); Nova Scotia (1.8 p.c.); Saskatchewan (2.1 p.c.) and British Columbia (3.7 p.c.). The figure for Prince Edward Island did not change significantly between July and August. In Newfoundland, total wages, salaries, and supplementary labour income declined by 0.4 p.c. from July to August.

D.													

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

 EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	 12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

# ESTIMATES OF LABOUR INCOME

SEPTEMBER 1963

## Quarter-to-Quarter Changes in Seasonally-Adjusted Data

Total wage, salary and supplementary labour income was 1.4 per cent higher in the third quarter of 1963 than the revised estimate for the second quarter. The wage and salary component increased by the same percentage as the total. Retroactive wage payments to federal government employees were made during the third quarter. Total wages and salaries exclusive of these payments increased 1.2 per cent from the second to third quarter.

Wage and salary totals for goods-producing industries advanced 0.4 per cent from the second to the third quarter. This is the smallest quarter-to-quarter increase recorded for this group of industries since first quarter 1961. Gains in primary industries of 2.7 per cent and in manufacturing of 0.7 per cent were partially offset by a decline of 2.9 per cent for construction wages and salaries. The number of persons employed in manufacturing for the third quarter of 1963 was almost the same as in the revised second quarter.

Total wages and salaries for service-producing industries increased by 2.2 per cent from the second quarter. An increase of 1.8 per cent would have been realized except for retroactive wage payments mentioned above. Finance and service recorded a gain of 2.8 per cent which is not unusual for this group of industries. Wages and salaries in trade advanced by 2.0 per cent from the second quarter, indicative of the quarter-to-quarter change in this industry for 1963.

Government non-military wages and salaries rose by 2.2 per cent from the second quarter. About two-thirds of this increase was attributed to retroactive wage payments made in the third quarter to federal government employees. Wage and salary payments for transportation, communication, and other utilities industries were up 1.3 per cent. However, this increase was mainly as a consequence of retroactive wage payments to post office employees in the communication industry during the third quarter.

Recent quarter-to-quarter percentage changes in seasonally-adjusted estimates of wages and salaries for Canada follow.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

6. Wages and salaries in manufacturing by province or region adjusted for seasonal variation .....	11
EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part 1 - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

OCTOBER 1963

Total labour income was estimated at \$1,896.4 million for the month of October. This figure was \$11.1 million or 0.6 p.c. lower than the September total.

Wages, salaries, and supplementary labour income, seasonally-adjusted, rose to \$1,851.5 million. This October total was \$16.3 million or 0.9 p.c. higher than the September estimate. Gains which approximated the national increase were evident in Quebec, Ontario, Alberta and British Columbia. Increases of about 2.0 p.c. were recorded in each of the following provinces: Newfoundland, Prince Edward Island and Saskatchewan. Labour income in Nova Scotia and Manitoba advanced by 0.2 p.c. and 0.5 p.c. respectively from September to October. Total wages, salaries, and supplementary labour income declined by 0.3 p.c. in New Brunswick during this same period.

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

### Contents include:

Part 1 - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

NOVEMBER 1963

Wages, salaries, and supplementary labour income for November declined seasonally to a total of \$1,883.6 million. This figure was \$14.3 million or 0.8 p.c. lower than the October estimate.

Seasonally-adjusted labour income was estimated at \$1,867.4 million for November. This total was \$14.4 million or 0.8 p.c. higher than the revised October figure. All provinces, with the exception of Prince Edward Island, shared in this national increase. Gains of less than 1.0 p.c. were recorded in British Columbia (0.3 p.c.); Quebec (0.5 p.c.); Nova Scotia (0.6 p.c.) and Ontario (0.8 p.c.). Labour income advanced by about 1.0 p.c., from October to November, in both Newfoundland and Manitoba. Somewhat larger increases were evident in Alberta (2.0 p.c.); New Brunswick (2.1 p.c.) and Saskatchewan (2.3 p.c.). Total labour income for Prince Edward Island did not change from October to November.

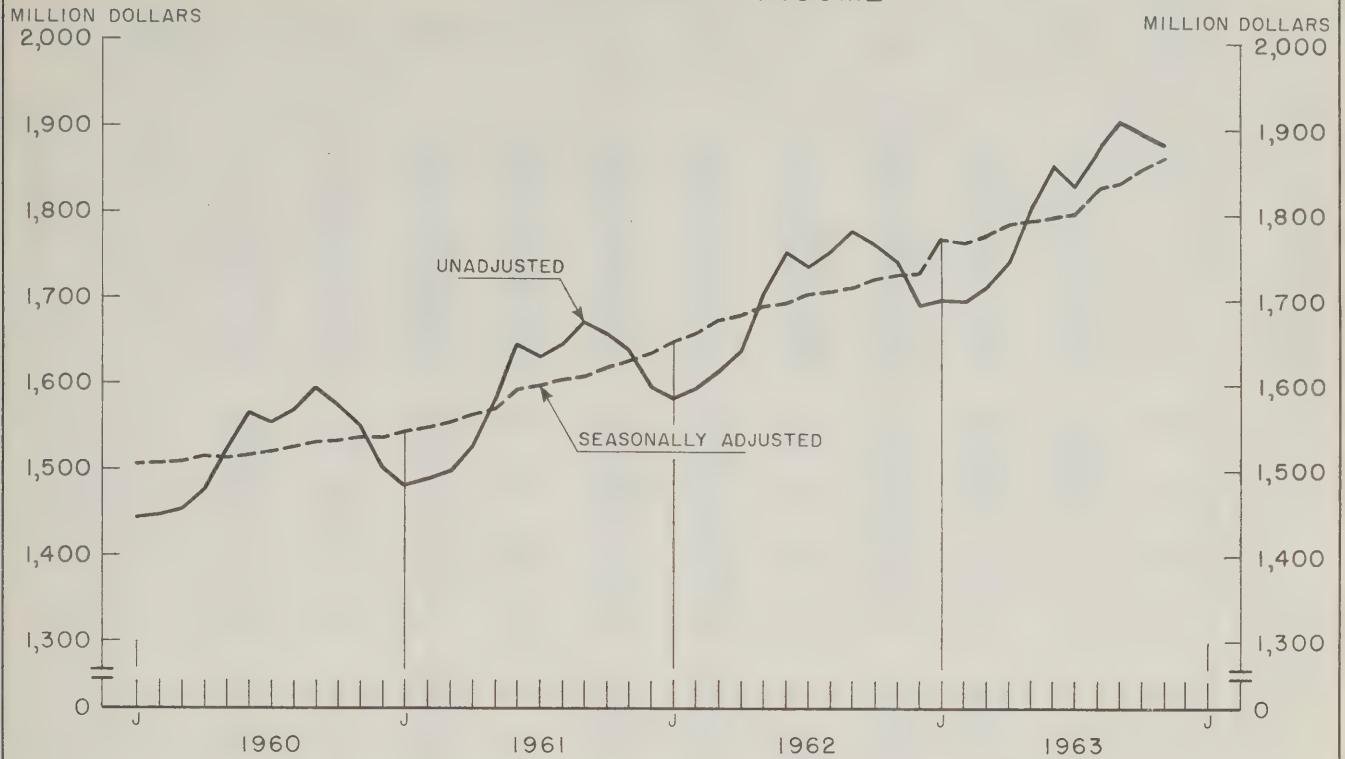

## Percentage Changes in Monthly and Quarterly Estimates

The current issue of Estimates of Labour Income includes all data for 1959 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The most recent monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1964.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by D. B. S., published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditure: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the D. B. S. monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502)

Contents include:

Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.

Part II- Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and unadjusted form.

Part III Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

# LABOUR INCOME, 1963

The 1963 annual total of labour income increased 6.8 per cent over 1962 to \$21,550 million. This gain was higher than the increase of 6.3 per cent for the previous year. The largest percentage gains were recorded in non-government service (10.4 per cent) and finance, insurance and real estate (8.1 per cent).

Seasonally adjusted estimates of wages and salaries rose more rapidly in the opening and closing quarters of 1963 than in the two mid-quarters. Estimated increases were; first quarter, 2.2 per cent; second quarter, 1.2 per cent; third quarter, 1.9 per cent; and fourth quarter, 2.5 per cent. The service-producing industries accounted for most of the rise in the first three quarters while the goods-producing industries were responsible for most of the increase in the fourth quarter.

In 1963, 41.5 per cent of total wages and salaries originated in the goods-producing industries and the remainder in the service-producing industries. This represented a slight increase in the proportion of wages and salaries originating in the service-producing industries continuing a trend characteristic of the post-war period.

The size of quarter-to-quarter changes in the two segments has varied considerably over the short run, largely owing to cyclical factors. In general, the goods-producing industries have been more responsive to cyclical influences. Thus, the goods-producing total has tended to rise more rapidly than the service-producing total in the early part of the expansion phase with the service-producing total rising more rapidly when the expansion phase was well advanced. Towards the end of 1961 the goods-producing total moved ahead more rapidly than the service-producing total for several quarters. The goods-producing totals increased less rapidly from the fourth quarter, 1962, until the fourth quarter, 1963, when the goods-producing industries registered a notable advance. The following table shows quarter-to-quarter changes in wage and salary totals over the last two years.

Government non-military .....	2.4	0.6	1.0	1.1	5.2	- 1.5	3.1	1.5	9.5

Wages and salaries in the goods-producing industries in 1963 increased sharply in the first quarter, lost some impetus in the second and third quarters and regained momentum in the fourth quarter. This pattern was repeated for manufacturing. Construction increased in the first quarter, declined in the second and third quarters and rose sharply in the fourth quarter.

In the service-producing industries in 1963, finance and service continued the pattern of recent years by showing increases of two per cent or more in all quarters. Transportation, communication and other utilities also showed increases throughout the year although of smaller magnitude. Government non-military showed a large increase in the first quarter, declined in the second quarter, and increased moderately in the third and fourth quarters. Increases in the first and third quarters for government non-military and in the third quarter for transportation, communication and other utilities were due, in part, to retroactive wage payments.

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

### Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

JANUARY 1964

Total labour income was estimated at \$1,817.7 million for the month of January. This was a decline of \$6.9 million or 0.4 p.c. from the December 1963 figure.

The seasonally-adjusted total of wages, salaries, and supplementary labour income amounted to \$1,892.1 million. This January figure was \$22.3 million or 1.2 p.c. larger than the December total. Labour income in Nova Scotia and Alberta advanced by 2.9 p.c. and 2.7 p.c. respectively. Gains of about 2.0 p.c. were recorded in Prince Edward Island and in New Brunswick and of about 1.5 p.c. in Newfoundland and Manitoba. Increases in labour income approximated the national gain of 1.2 p.c. in both Quebec and Ontario. Wages, salaries, and supplementary labour income advanced 0.8 p.c. in Saskatchewan and 0.2 p.c. in British Columbia from December to January.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- <sup>r</sup> Includes minor revisions.

5. Wages and salaries in manufacturing by province or region .....	10
6. Wages and salaries in manufacturing by province or region adjusted for seasonal variation .....	11
EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

### Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

FEBRUARY 1964

The February total of wages, salaries, and supplementary labour income amounted to \$1,824.3 million: an increase of \$7.6 million or 0.4 p.c. from the revised January figure.

The total of seasonally-adjusted labour income rose to \$1,899.9 million in February representing a gain of \$8.6 million or 0.5 p.c. from January. Increases in labour income of more than 1.0 p.c. were recorded in Newfoundland (3.7 p.c.), Prince Edward Island (1.9 p.c.) and Nova Scotia (1.1 p.c.). Gains of about 0.5 p.c. were evident in Quebec, Ontario and British Columbia. Total labour income in Alberta was unchanged from January to February. Declines in total wages, salaries, and supplementary labour income occurred in Saskatchewan (-0.2 p.c.), New Brunswick (-0.3 p.c.) and Manitoba (-0.5 p.c.).

For footnotes (1) to (5) and symbols, see page 12.

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

### Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

# ESTIMATES OF LABOUR INCOME

## Changes in Seasonally-Adjusted Data

Seasonally-adjusted estimates of total labour income and total wages and salaries for the first quarter of 1964 were each 2.7 per cent higher than the corresponding figures for the fourth quarter 1963. These quarter-to-quarter increases were the highest since the first quarter of 1959.

The pattern developed in the fourth quarter, 1963, continued in the first quarter, 1964, with the goods-producing industries showing larger quarter-to-quarter increases in wages and salaries than the service-producing industries. Thus, wages and salaries in the goods-producing industries increased \$83.5 million to \$2,297.3 million (3.8 per cent) from the fourth quarter, 1963, to the first quarter, 1964, compared to an increase of \$61.0 million to \$3,179.0 million (2.0 per cent) for the service-producing industries.

In the goods-producing industries, construction showed the highest quarter-to-quarter percentage gain, 7.8 per cent (\$28.6 million), while manufacturing had the highest absolute gain, \$47.9 million (3.1 per cent). Primary industries had an increase of 2.5 per cent (\$7.1 million).

Finance and service showed the highest percentage gain, 3.3 per cent (\$39.3 million) in the service-producing industries. The remaining groups within the service-producing industry also showed gains in the quarter-to-quarter seasonally-adjusted data.

Most of the strong quarter-to-quarter increase in labour income was concentrated in the early part of the quarter. Month-to-month increases were 1.1 per cent in January, 0.6 per cent in February, and 0.2 per cent in March. Monthly data for the last three months of 1963 and the first three months of 1964 show that increases in December and January were higher than usual.

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

APRIL 1964

Total labour income was estimated at \$1,868.4 million for the month of April. This represents an increase of \$28.9 million or 1.6 p.c. from the revised March figure. The April total includes \$2.0 million in retroactive wage payments received by a group of federal government employees.

Seasonally-adjusted wages, salaries, and supplementary labour income rose to a total of \$1,911.0 million. This April figure was \$4.6 million or 0.2 p.c. higher than the previous month. New Brunswick and Prince Edward Island recorded increases in total labour income of 2.8 p.c. and 2.0 p.c. respectively. Gains of 1.3 p.c. were shown in both Alberta and British Columbia and a slightly smaller increase of 1.0 p.c. was reported for Newfoundland. Labour income in both Quebec and Manitoba advanced 0.1 p.c. from March to April. Declines of 0.3 p.c. were recorded in Ontario and in Saskatchewan whereas total labour income in Nova Scotia was down 1.1 p.c. from March to April.

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

### Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

MAY 1964

Total wages, salaries, and supplementary labour income rose to \$1,939.6 million during the month of May. This figure was \$69.1 million or 3.7 p.c. higher than the April estimate.

The seasonally-adjusted total of labour income was estimated at \$1,921.6 million; an increase of \$8.5 million or 0.4 p.c. from the revised April total. Labour income advanced from April to May in Quebec (1.1 p.c.); Nova Scotia (0.8 p.c.); British Columbia (0.7 p.c.); Ontario (0.5 p.c.) and Manitoba (0.3 p.c.). Total labour income for Prince Edward Island remained steady during this period. Declines in wages, salaries, and supplementary labour income from April to May were recorded in New Brunswick (- 0.2 p.c.); Alberta (- 0.3 p.c.); Saskatchewan (- 1.3 p.c.) and Newfoundland (- 4.2 p.c.).

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
r Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

### Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

# ESTIMATES OF LABOUR INCOME

## Changes in Seasonally-Adjusted Data

Seasonally-adjusted estimates of total labour income and total wages and salaries for the second quarter of 1964 were each 1.1 per cent higher than the corresponding figures for the first quarter 1964. These quarter-to-quarter increases were the lowest since the first quarter of 1961. Within the quarter month-to-month increases were 0.3 per cent in April, and 0.6 per cent in May. June had a decrease of 0.1 per cent.

Goods-producing industries totals for wages and salaries showed a decline in the second quarter, 1964, after the large increases of the last two quarters. The decline was \$6.4 million (0.3 per cent) to \$2,289.6 million. The service-producing industries continued the increases of the past two quarters. Estimates were \$3,245.5 million, an increase of \$65.4 million (2.1 per cent).

The decrease in the goods-producing total was due to a \$16.6 million (4.2 per cent) drop in construction. Manufacturing increased \$3.4 million (0.2 per cent) while primary industries increased \$6.8 million (2.3 per cent).

In the service-producing industries, all groups showed quarter-to-quarter increases. These ranged from 1.4 per cent for transportation, communication and other utilities to 2.6 per cent for finance and service.

## PRESENTATION OF LABOUR INCOME STATISTICS

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

### Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

JULY 1964

Total labour income for the month of July declined seasonally to \$1,977.4 million. This figure was \$18.1 million or 0.9 p.c. lower than the revised June estimate.

Seasonally adjusted wages, salaries, and supplementary labour income advanced to \$1,945.1 million in July. This increase of \$17.6 million or 0.9 p.c. from June to July, was one of the largest gains recorded this year. Labour income in British Columbia increased by 2.2 p.c., however, almost one-half of this gain resulted from the settlement of industrial disputes in July. Other increases were recorded in Nova Scotia (1.3 p.c.); Quebec (1.2 p.c.); New Brunswick (1.0 p.c.); Alberta (0.9 p.c.); Ontario (0.4 p.c.) and Saskatchewan (0.3 p.c.). Labour income was almost unchanged in Manitoba from June to July. Declines in labour income occurred in both Newfoundland (- 1.0 p.c.) and Prince Edward Island (- 1.9 p.c.).

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

### Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

AUGUST 1964

The August total of wages, salaries, and supplementary labour income rose to \$2,016.7 million; an increase of \$34.6 million or 1.7 p.c. from the July estimate.

Seasonally-adjusted labour income for August was estimated at \$1,968.9 million. This figure was \$19.6 million or 1.0 p.c. above the July estimate. All provinces, with the exception of Manitoba and Saskatchewan, shared in this national increase. Gains in labour income from July to August were recorded in Prince Edward Island (1.9 p.c.); British Columbia (1.6 p.c.); Ontario (1.4 p.c.); New Brunswick (1.2 p.c.); Alberta (1.0 p.c.); Nova Scotia (0.9 p.c.); Quebec (0.8 p.c.) and Newfoundland (0.7 p.c.). Total labour income declined from July to August in Saskatchewan (- 0.5 p.c.) and Manitoba (- 1.4 p.c.).

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
  - r Includes minor revisions.

EXPLANATORY NOTES, FOOTNOTES AND SYMBOLS .....	12

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

# ESTIMATES OF LABOUR INCOME

SEPTEMBER 1964

## Quarter-to-Quarter Changes in Seasonally-Adjusted Data

Total labour income advanced 2.6 p.c. from the second to the third quarter of 1964 after adjustments were made to exclude normal seasonal influences. Wages and salaries alone increased by 2.7 p.c. with the goods-producing industries recording a gain of 2.2 p.c. and the service-producing industries advancing by 3.0 p.c. The service-producing segment includes retroactive wage and salary payments in the third quarter and a gain of 2.6 p.c. would have been recorded in this group except for these payments.

The increase of 2.7 p.c. for total wages and salaries was similar to the increases recorded in the fourth quarter of 1963 and the first quarter of 1964. These quarter-to-quarter gains were among the largest which have occurred since 1956.

The rise in the goods-producing industries between the second and third quarters of 1964 was mostly attributed to manufacturing wages and salaries. This industry advanced 2.7 p.c. and showed a distinct improvement from the moderate gain evident between the first and second quarters. Although construction rose 0.8 p.c. from the second to the third quarter it has not reached the level obtained in the first quarter of the year. Primary industries were up 1.7 p.c. over this same period.

Each of the industry groups within the service-producing segment recorded quarter-to-quarter increases equivalent to the service-producing total. Finance and service wages and salaries rose 2.9 p.c. and trade advanced 2.8 p.c. from the second to the third quarter. However, discounting retroactive wage and salary payments, the gain of 3.2 p.c. for government non-military wages and salaries would be reduced to 1.7 p.c. A similar adjustment to wages and salaries in the transportation, communication and other utilities group would change the increase from 3.0 p.c. to 2.3 p.c.

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

OCTOBER 1964

Wages, salaries, and supplementary labour income declined to a total of \$2,047.7 million for the month of October. This estimate was \$26.9 million or 1.3 p.c. lower than the revised September total.

Seasonally adjusted, total labour income was \$1.9 million or 0.1 p.c. lower in October than in September. Substantial retroactive wage and salary payments were made in September while lay-offs due to a major industrial dispute occurred in October. If these two factors were eliminated then total labour income would have gained 0.8 p.c. Increases in labour income, from September to October, were recorded in both Alberta and British Columbia of 1.8 p.c.; Manitoba (1.2 p.c.); Nova Scotia (1.1 p.c.); Saskatchewan (0.5 p.c.) and Quebec (0.1 p.c.). Wages, salaries, and supplementary labour income declined between these two months in Newfoundland (- 0.7 p.c.); Ontario (- 0.9 p.c.); New Brunswick (- 1.9 p.c.) and Prince Edward Island (- 5.5 p.c.).

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- x Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

### Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

NOVEMBER 1964

Total labour income for the month of November was estimated at \$2,034.6 million; a decline of \$18.8 million or 0.9 p.c. from the October figure.

Seasonally adjusted wages, salaries, and supplementary labour income rose to \$2,018.4 million. This total was \$16.2 million or 0.8 p.c. higher than the revised October estimate. Gains in total labour income were recorded in all provinces with the exception of Prince Edward Island and British Columbia. These increases, from October to November, were as follows: Saskatchewan (2.2 p.c.); Manitoba and Alberta (1.5 p.c.); Nova Scotia (1.1 p.c.); Newfoundland (1.0 p.c.); New Brunswick and Ontario (0.7 p.c.) and Quebec (0.5 p.c.). Labour income for Prince Edward Island and for British Columbia did not change from October to November.

The current issue of Estimates of Labour Income includes all data for 1960 and later years that have been published by the Dominion Bureau of Statistics except for a few special tables that may be found in recent issues of National Accounts, Income and Expenditure. Revised data for all months in 1957 were published monthly in issues of Estimates of Labour Income for the period from December 1960 to August 1961; revised 1958 data may be found in issues for the months from December 1961 to November 1962; revised 1959 figures are located in the December 1962 to November 1963 issues. The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Historical figures for the individual Atlantic and Prairie provinces have been published on a monthly basis only in the yellow supplement to the August 1962 issue of Estimates of Labour Income.

The 1964 monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1965.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

The monthly and quarterly income estimates are obtained by applying indicators of short-run change to the estimated annual totals. About four-fifths of aggregate labour income is estimated on the basis of payroll indexes obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.
- r Includes minor revisions.

Further information on labour income is contained in the basic reference document Labour Income 1926-58 (Catalogue number 72-502).

Contents include:

- Part I - Definitions and Concepts. General notes explaining what the estimates of labour income measure.
- Part II - Tables. A complete record of annual estimates of labour income from 1926, and of monthly (or quarterly) figures from 1947. Monthly and quarterly estimates are presented in both seasonally-adjusted and un-adjusted form.
- Part III - Sources and Methods. Detailed notes on the manner in which the estimates were prepared.

Copies of Labour Income 1926-58 (Catalogue number 72-502) may be obtained from the Information Services Division, Dominion Bureau of Statistics or from the Queen's Printer, Ottawa. Price 75 cents.

## ESTIMATES OF LABOUR INCOME

Total labour income for 1964 was estimated at \$23,416 million. This figure is 8.7 per cent larger than the 1963 total and is the largest year-to-year gain recorded since 1956. The totals for both the goods-producing and the service-producing industries rose at a rate similar to the national gain of 8.7 per cent.

Total wages and salaries for the goods-producing industries advanced 9.0 per cent from 1963 to 1964. The largest increase in this group occurred in construction (11.6 per cent) although substantial gains were also made in manufacturing (8.7 per cent).

The service-producing industries aggregate of wages and salaries, for 1964, was up 8.8 per cent over 1963. Finance and service recorded a gain of 11.4 per cent and trade advanced 8.7 per cent. Wages and salaries for government non-military and also for the transportation, communication and other utilities industries rose by 6.0 per cent from 1963 to 1964.

Total wages and salaries, seasonally adjusted, increased 1.8 per cent from the third to fourth quarter of 1964. This increase is somewhat lower than the gain of 2.7 per cent recorded in the second to third quarter comparison. However, the third quarter includes substantial retroactive wage payments while the fourth quarter was affected by industrial disputes.

The seasonally adjusted total of wages and salaries for the goods-producing industries was 2.0 per cent higher in the fourth quarter than in the previous quarter. Wages and salaries in construction had a sharp rise of 8.9 per cent in the fourth quarter following a decline in the second quarter and a moderate increase in the third. Manufacturing wages and salaries, seasonally adjusted, increased 0.8 per cent in the fourth quarter. This increase would have been considerably larger except for the effect of industrial disputes in the fourth quarter.

Seasonally adjusted wages and salaries for the service-producing industries advanced 1.7 per cent from the third to fourth quarter of 1964. Finance and service wages and salaries showed a gain of 2.6 per cent in the fourth quarter; a quarter-to-quarter increase similar to those recorded in the previous six quarters. Total wages and salaries in trade increased 1.8 per cent in the third to fourth quarter comparison. Transportation, communication and other utilities wages and salaries, seasonally adjusted, were 1.5 per cent higher in this same period. Retroactive wage payments were partly responsible for the sharp increase between the second and third quarters. The total of government non-military wages and salaries declined from the third to fourth quarter, however, this was entirely due to retroactive wage payments received in the third quarter.

This issue of Estimates of Labour Income includes all labour income statistics that are currently published by the Dominion Bureau of Statistics except for a few special tables that may be found in National Accounts, Income and Expenditure (D.B.S. Cat. No. 13-201). Revised monthly data for the period 1957-60 are located in the specified issues of Estimates of Labour Income: 1957 (December 1960 to August 1961); 1958 (December 1961 to November 1962); 1959 (December 1962 to November 1963) and 1960 (December 1963 to November 1964). The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Monthly data for the period 1947-58 for the individual Atlantic and Prairie provinces are located in a supplement to the August 1962 issue of Estimates of Labour Income.

The latest monthly or quarterly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1966.

The monthly and quarterly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

#### FOOTNOTES

- (1) Monthly and quarterly figures may not add to annual totals because of rounding.
- (2) Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.
- (3) Includes post office wages and salaries.
- (4) Includes Yukon, Northwest Territories, and Canadian residents abroad. The differences between monthly Canada totals and the totals for the ten provinces should not be taken as reliable measures for this group.
- (5) Includes Finance, Insurance, Real Estate.  
r Includes minor revisions.

#### NOTE TO USERS

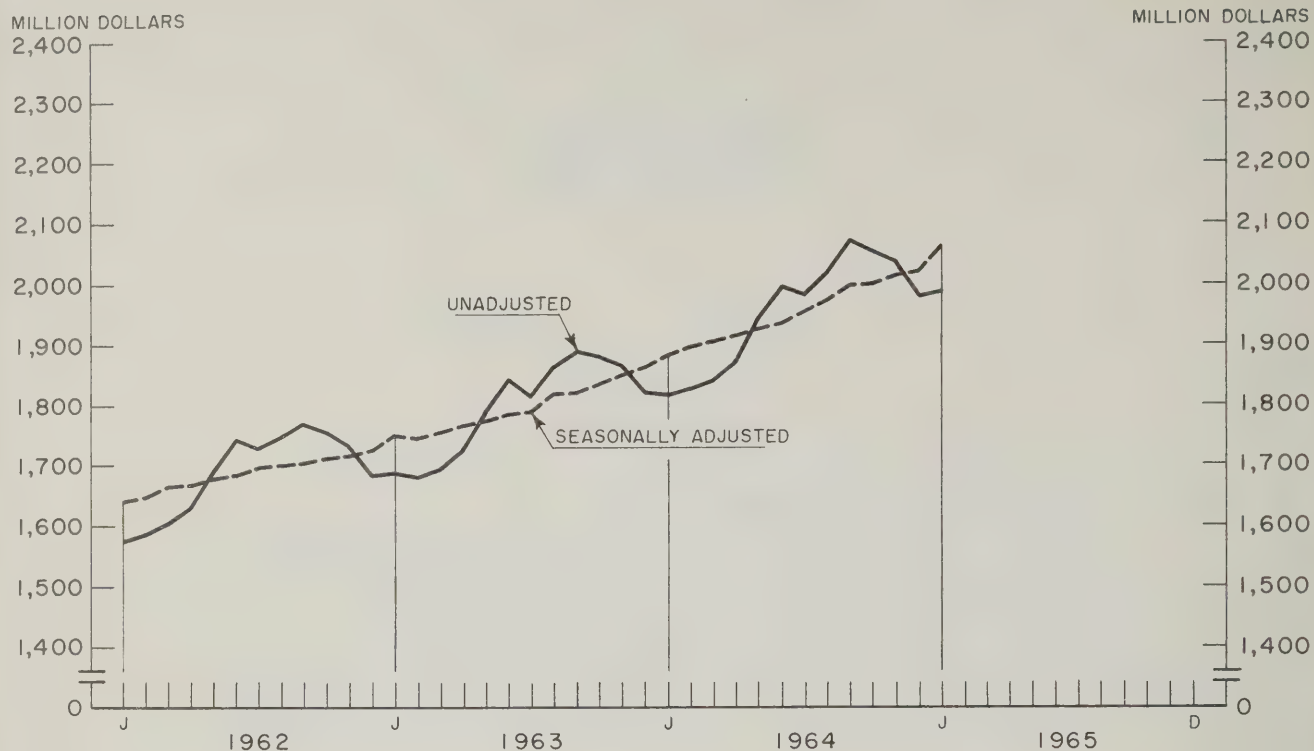

Sufficient demand for monthly figures of wages and salaries, for the industry divisions for which only quarterly totals were shown, has been expressed to warrant their publication for the first time. Similarly, monthly estimates of manufacturing wages and salaries are shown for the individual provinces. However, it should be noted that the smaller industry and provincial figures are less reliable than most of the larger estimates. Regional estimates of labour income and of manufacturing wages and salaries have been omitted since they can now be obtained by the summation of the specified provinces.

Wages and salaries for finance, insurance and real estate and for service are now shown separately in order to adhere more closely to the Standard Industrial Classification. The current monthly estimates for these industries are based on somewhat less reliable extrapolators than those employed in most of the other industries.

## TOTAL LABOUR INCOME

## MANUFACTURING WAGES AND SALARIES

## ESTIMATES OF LABOUR INCOME

JANUARY 1965

Total labour income of \$1,988.3 million in January was \$9.7 million or 0.5 p.c. greater than the December estimate. This increase was shared by all industries with the exception of agriculture, fishing and trapping; trade and government non-military service. Gains in New Brunswick, Ontario, Alberta and British Columbia were sufficient to offset the declines recorded in most of the other provinces.

The seasonally-adjusted estimate of labour income rose to a total of \$2,060.1 million. This January figure was \$39.9 million or 2.0 p.c. larger than the revised December total. Wages and salaries in forestry and construction increased by 8.5 p.c. and 5.7 p.c. respectively from December to January. Other increases of over 2.0 p.c. occurred in manufacturing and public utilities. Gains which ranged between 1.0 p.c. and 2.0 p.c. were recorded in the remaining industries with the exception of agriculture, fishing and trapping and the government non-military service industries. These latter industries declined by about 1.0 p.c. in January. Labour income, seasonally adjusted, recorded increases from December to January in each of the provinces.

## Percentage Change in Monthly Estimates

See footnotes at bottom of Table 1.

This issue of Estimates of Labour Income includes all labour income statistics that are currently published by the Dominion Bureau of Statistics except for a few special tables that may be found in National Accounts, Income and Expenditure (D.B.S. Cat. No. 13-201). Revised monthly data for the period 1957-60 are located in the specified issues of Estimates of Labour Income: 1957 (December 1960 to August 1961); 1958 (December 1961 to November 1962); 1959 (December 1962 to November 1963) and 1960 (December 1963 to November 1964). The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Monthly data of total labour income for the period 1947-58 for the individual Atlantic and Prairie provinces are located in a supplement to the August 1962 issue of Estimates of Labour Income.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1966.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

## TOTAL LABOUR INCOME

## MANUFACTURING WAGES AND SALARIES

# ESTIMATES OF LABOUR INCOME

FEBRUARY 1965

Wages, salaries, and supplementary labour income was estimated at \$1,993.9 million for the month of February. This figure was \$3.5 million or 0.2 p.c. larger than the revised January total.

Seasonally-adjusted wages, salaries, and supplementary labour income increased in February to a total of \$2,073.2 million. This estimate was \$11.0 million or 0.5 p.c. greater than the previous month. All industries, with the exception of manufacturing, contributed to this gain. Wages and salaries in the primary industries of agriculture, fishing, trapping, forestry and mining increased \$3.6 million from January to February. Substantial gains were also recorded in trade (\$3.3 million); construction (\$2.7 million); service (\$2.5 million) and government non-military (\$1.4 million). Lesser gains occurred in transportation, storage and communication (\$0.7 million); finance, insurance and real estate (\$0.6 million) and public utility operation (\$0.1 million). A decline of \$4.0 million was recorded in manufacturing wages and salaries from January to February.

Total labour income, seasonally adjusted, rose \$6.2 million in Quebec. Gains of about \$1.0 million occurred in Newfoundland and Alberta. Increases in total labour income from January to February of \$0.5 million or less were recorded in Prince Edward Island; Nova Scotia; New Brunswick; Manitoba; Saskatchewan and British Columbia. Labour income in Ontario declined by \$2.3 million during this same period.

See footnotes at bottom of Table 1.

This issue of Estimates of Labour Income includes all labour income statistics that are currently published by the Dominion Bureau of Statistics except for a few special tables that may be found in National Accounts, Income and Expenditure (D.B.S. Cat. No. 13-201). Revised monthly data for the period 1957-60 are located in the specified issues of Estimates of Labour Income: 1957 (December 1960 to August 1961); 1958 (December 1961 to November 1962); 1959 (December 1962 to November 1963) and 1960 (December 1963 to November 1964). The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Monthly data of total labour income for the period 1947-58 for the individual Atlantic and Prairie provinces are located in a supplement to the August 1962 issue of Estimates of Labour Income.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1966.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

## TOTAL LABOUR INCOME

## MANUFACTURING WAGES AND SALARIES

## ESTIMATES OF LABOUR INCOME

MARCH 1965

Total labour income was estimated at \$2,031.9 million for March and was \$34.1 million or 1.7 per cent larger than the revised February total. This gain was shared by all provinces with the exception of Prince Edward Island and Alberta.

Seasonally-adjusted labour income totalled \$2,106.2 million in March; an increase of \$29.1 million or 1.4 per cent over the February figure. Forestry wages and salaries recorded the largest gain (11.5 per cent). Other significant gains occurred in manufacturing (2.7 per cent); mining (2.0 per cent); construction (1.8 per cent) and government non-military (1.3 per cent). Somewhat smaller increases were reported for the remaining industries with the exception of agriculture, fishing and trapping and public utility operation. Total wages and salaries for transportation, storage and communication remained unchanged from February to March.

Labour income, seasonally-adjusted, was higher in Nova Scotia (3.4 per cent); New Brunswick (2.3 per cent); Ontario (2.2 per cent); British Columbia (1.7 per cent) and Quebec (1.2 per cent). Smaller gains from February to March were recorded in Newfoundland and Manitoba with the only declines occurring in Prince Edward Island and Saskatchewan. Labour income for Alberta did not change from February to March.

This issue of Estimates of Labour Income includes all labour income statistics that are currently published by the Dominion Bureau of Statistics except for a few special tables that may be found in National Accounts, Income and Expenditure (D.B.S. Cat. No. 13-201). Revised monthly data for the period 1957-60 are located in the specified issues of Estimates of Labour Income: 1957 (December 1960 to August 1961); 1958 (December 1961 to November 1962); 1959 (December 1962 to November 1963) and 1960 (December 1963 to November 1964). The reference paper Labour Income 1926-58 contains a record of official data on labour income to the end of 1956. Data for 1957 and 1958 published in the reference paper are unrevised figures and should be disregarded. Monthly data of total labour income for the period 1947-58 for the individual Atlantic and Prairie provinces are located in a supplement to the August 1962 issue of Estimates of Labour Income.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available. The next series of annual revisions will be completed in the spring of 1966.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

#### CONCEPTS AND METHODS

Labour income is defined as the total of wages, salaries, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances. The wages and salaries component, which is specified to include living allowances, bonuses, commissions, and "tips", is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind are included in the total. The other component, supplementary labour income, comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund.

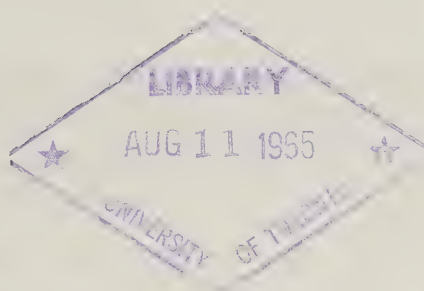

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### NOTE TO USERS

Monthly estimates of wages and salaries for the individual provinces are published for the first time in this issue and replace the series on labour income by provinces. Provincial estimates of wages and salaries are considered more reliable current indicators because reliable data on supplementary labour income are not presently available on a current basis. The data presented in tables 5 and 6 of this publication (wages and salaries in manufacturing by provinces) are now directly comparable with the figures presented in tables 3 and 4. Also, numerous requests have been received for estimates of wages and salaries by provinces.

Wages and salaries data for the months prior to January 1961 are available upon request. Also, total labour income figures, by provinces, will be prepared for those users interested in this particular series.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

## ESTIMATES OF LABOUR INCOME

APRIL 1965

The total of wages and salaries and of supplementary labour income for the month of April was estimated at \$2,067.9 million. This total was \$32.8 million or 1.6 per cent higher than the revised March figure. Aggregate wages and salaries increased in each of the provinces with the exception of New Brunswick.

Total labour income, seasonally adjusted, rose to a total of \$2,118.7 million during April and was \$9.1 million or 0.4 per cent larger than the March estimate. Gains of about 1.5 per cent each were recorded for forestry; trade and government non-military industries. Wages and salaries for service increased 1.1 per cent from March to April. Increases of about 0.5 per cent occurred in public utilities; transportation, storage and communication and finance, insurance and real estate. Manufacturing wages and salaries rose slightly and mining remained unchanged. Declines in aggregate wages and salaries, from March to April, occurred in the agriculture, fishing and trapping group of industries (- 1.4 per cent) and in construction (- 2.7 per cent).

Seasonally-adjusted total wages and salaries was higher in each of the provinces with the exception of Prince Edward Island which remained unchanged from March to April. Gains of approximately 1.0 per cent were recorded in Newfoundland; Nova Scotia and British Columbia. Increases of about 0.5 per cent occurred in New Brunswick; Ontario; Manitoba and Alberta. Total wages and salaries for Quebec and for Saskatchewan each rose 0.2 per cent from March to April.

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

## ESTIMATES OF LABOUR INCOME

MAY 1965

Wages, salaries, and supplementary labour income totalled \$2,144.3 million for the month of May. This figure was \$73.7 million or 3.6 per cent larger than the revised April total of \$2,070.6. Wages and salaries were estimated at \$2,064.3 million for May; an increase of \$72.6 million or 3.6 per cent from the April figure of \$1,991.7.

Seasonally-adjusted labour income for May was estimated at \$2,128.4 million and was \$7.0 million or 0.3 per cent higher than the April total. Total wages and salaries, seasonally-adjusted, rose to \$2,048.4 million. This figure was \$6.8 million or 0.3 per cent higher than the April estimate. Wages and salaries in mining advanced 1.6 per cent from April to May. Gains within the range of 0.6 per cent to 0.9 per cent were recorded in transportation, storage and communication; public utility operation; trade; finance, insurance and real estate and the service industries. Manufacturing wages and salaries increased 0.4 per cent and the agriculture, fishing and trapping group of industries remained unchanged from April to May. Declines in seasonally-adjusted wages and salaries occurred in government non-military (- 0.7 per cent); forestry (- 1.5 per cent) and construction (- 1.9 per cent).

Increases in aggregate wages and salaries, seasonally-adjusted, were recorded in New Brunswick (2.1 per cent); Newfoundland and Prince Edward Island (1.9 per cent each); British Columbia (1.2 per cent); Ontario (0.6 per cent) and Quebec (0.3 per cent). Total wages and salaries decreased by 0.4 per cent in Alberta and by 0.6 per cent in both Manitoba and Saskatchewan. Seasonally-adjusted wages and salaries in Nova Scotia declined 2.1 per cent from April to May.

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

# ESTIMATES OF LABOUR INCOME

JUNE 1965

Total labour income for the month of June was estimated at \$2,205.0 million; an increase of \$59.0 million or 2.7 per cent over the revised May total of \$2,146.0 million. Wages and salaries totalled \$2,124.0 million in June and was \$58.1 million or 2.8 per cent higher than the May aggregate of \$2,065.9 million.

Seasonally-adjusted labour income and seasonally-adjusted wages and salaries advanced by 0.5 per cent from May to June. Labour income rose \$10.3 million, from \$2,130.0 million to \$2,140.3 million, and wages and salaries increased \$10.0 million, from \$2,050.0 million in May to \$2,060.0 million in June. Percentage gains in wages and salaries which were larger than the national increase were recorded in government non-military (1.3 per cent); construction (1.2 per cent); service (1.1 per cent); manufacturing (0.9 per cent) and finance, insurance and real estate (0.7 per cent). Wages and salaries in trade advanced 0.3 per cent from May to June while the agriculture, fishing and trapping group of industries and mining remained unchanged during this same period. Seasonally-adjusted wages and salaries declined in public utilities (- 0.5 per cent); transportation, storage and communication (- 1.9 per cent) and forestry (- 4.0 per cent).

Increases in provincial wages and salaries occurred in Prince Edward Island (1.8 per cent); British Columbia (1.6 per cent); Manitoba (1.0 per cent); Ontario (0.6 per cent); Alberta (0.4 per cent); Quebec (0.3 per cent) and Nova Scotia (0.2 per cent). Declines in seasonally-adjusted wages and salaries, from May to June, were recorded in Newfoundland (- 0.6 per cent); Saskatchewan (- 0.6 per cent) and New Brunswick (- 0.9 per cent).

Total wages and salaries estimated at annual rates, seasonally-adjusted, for the first six months of 1965 showed an increase of 8.1 per cent over the 1964 figure. Gains above the national rate were recorded in construction (16.8 per cent); forestry and mining (9.9 per cent each) and service (9.6 per cent). Wages and salaries for trade rose 7.7 per cent and manufacturing advanced 7.3 per cent. Finance, insurance and real estate advanced 6.4 per cent and transportation, storage and communication and public utilities increased 6.0 per cent over the first six months. Government non-military wages and salaries were up 4.6 per cent and agriculture, fishing and trapping rose 3.6 per cent during this same period.

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

# ESTIMATES OF LABOUR INCOME

JULY 1965

The total of wages, salaries and supplementary labour income declined seasonally in July to a level of \$2,193.0 million. This figure was \$18.9 million or 0.9 per cent lower than the revised June total of \$2,211.9 million.

Seasonally-adjusted labour income increased \$16.6 million or 0.8 per cent in July and was estimated at \$2,163.5 million. Wages and salaries advanced \$16.3 million or 0.8 per cent from the revised June total of \$2,066.5 million to the July estimate of \$2,082.8 million. The largest percentage increases were recorded in forestry (3.5 per cent); transportation, storage and communication (2.3 per cent) and public utilities (2.1 per cent). However, each of these industries had declined from May to June and this partially accounts for the larger than average percentage increase from June to July. Gains which approximated the national figure occurred in service (0.9 per cent) and manufacturing (0.7 per cent). Construction, trade and finance, insurance and real estate each recorded an increase of 0.6 per cent. Declines in wages and salaries, from June to July, took place in government non-military (-0.1 per cent); agriculture, fishing and trapping (-0.5 per cent) and mining (-1.1 per cent).

Seasonally-adjusted wages and salaries had larger than average percentage increases in Alberta (1.9 per cent); Prince Edward Island (1.8 per cent); Saskatchewan (1.7 per cent); New Brunswick (1.6 per cent) and British Columbia (1.5 per cent). Wages and salaries in both Quebec and Ontario rose 0.8 per cent from June to July. Decreases in total wages and salaries were recorded in Manitoba (-0.6 per cent); Nova Scotia (-0.9 per cent) and Newfoundland (-1.2 per cent).

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

# ESTIMATES OF LABOUR INCOME

AUGUST 1965

The Canada total of wages and salaries rose from \$2,118.2 million in July to \$2,145.9 million in August while total labour income advanced from \$2,199.1 million to \$2,227.3 million over the same period. In both estimates, the percentage increase amounted to 1.3.

Seasonally-adjusted wages and salaries totalled \$2,104.4 million in August and was \$16.2 million or 0.8 per cent greater than the revised July figure of \$2,088.2 million. Government non-military wages and salaries advanced 3.0 per cent, however, most of this increase being attributable to retroactive wage payments received by provincial government employees. Wages and salaries for mining were up 2.9 per cent in August after recording a decline of 1.1 per cent in July. Other gains were recorded in construction (1.6 per cent); public utilities (1.6 per cent); trade (1.2 per cent); agriculture, fishing and trapping (1.0 per cent); manufacturing (0.8 per cent); finance, insurance and real estate (0.6 per cent) and service (0.4 per cent). Wages and salaries in transportation, storage and communication declined 1.5 per cent from July to August and forestry was down 5.7 per cent. Both of these industries had recorded larger than average increases from June to July.

Seasonally-adjusted wages and salaries for Newfoundland were up 3.4 per cent from July to August and Nova Scotia recorded a gain of 2.4 per cent. Somewhat smaller increases occurred in New Brunswick (1.1 per cent); Quebec (0.9 per cent); Alberta (0.8 per cent); Manitoba (0.7 per cent); Ontario (0.6 per cent) and British Columbia (0.4 per cent). Wages and salaries in Saskatchewan declined 0.3 per cent and the Prince Edward Island total decreased 1.8 per cent from July to August.

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

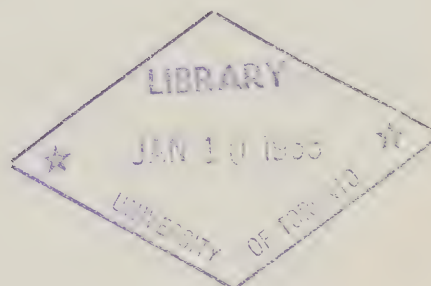

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

# ESTIMATES OF LABOUR INCOME

SEPTEMBER 1965

Total wages and salaries were estimated at \$2,212.8 million for September and stood \$59.6 million or 2.8 per cent higher than the revised August figure of \$2,153.2 million. Part of this increase resulted from \$15.0 million in retroactive wage payments received by federal government employees. Wages, salaries and supplementary labour income rose from \$2,234.7 million in August to \$2,295.2 million in September.

Wages and salaries, seasonally-adjusted, advanced \$20.6 million or 1.0 per cent from the August figure of \$2,110.6 million to \$2,131.2 million in September. One-half of this gain was attributable to the retroactive wage payments mentioned above. Transportation, storage and communication wages and salaries were up 7.3 per cent, with about two-thirds of this increase resulting from retroactive wage payments to postal employees. The service industry recorded a gain of 1.3 per cent and trade was up 0.9 per cent from August to September. Wages and salaries in most of the primary industries declined in September. Construction wages and salaries decreased 1.2 per cent after recording above-average increases during the previous three months.

Seasonally-adjusted wages and salaries for British Columbia advanced 2.6 per cent and those in Saskatchewan rose 2.3 per cent from August to September. Gains of about 1.5 per cent occurred in both Newfoundland and New Brunswick. Ontario advanced 1.3 per cent with about one-third of this increase being the result of retroactive wage payments. Somewhat smaller changes were recorded in the other five provinces.

## Percentage Changes in Monthly Estimates

	Unadjusted		Seasonally adjusted			
	August/65 to September/65	September/64 to September/65	May/65 to June/65	June/65 to July/65	July/65 to August/65	August/65 to September/65

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

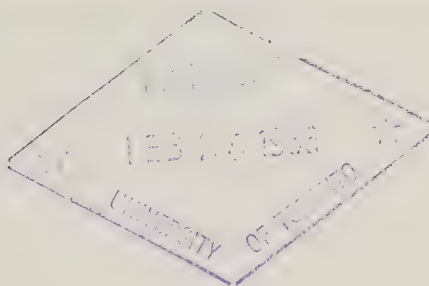

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

# ESTIMATES OF LABOUR INCOME

OCTOBER 1965

Wages, salaries, and supplementary labour income declined \$7.0 million or 0.3 per cent from the September figure of \$2,305.7 million to the October total of \$2,298.7 million. A similar decline occurred in total wages and salaries and resulted entirely from the substantial retroactive wage payments in September.

Seasonally-adjusted labour income was estimated at \$2,238.0 million for October, an increase of \$15.2 million or 0.7 per cent from the September figure. Gains in manufacturing (\$15.2 million), construction (\$9.0 million), service (\$5.5 million) and trade (\$2.8 million) were partially off-set by declines in government non-military (\$12.9 million) and transportation, storage and communication (\$5.4 million). These decreases were caused by the retroactive wage payments mentioned above.

Seasonally-adjusted wages and salaries were higher in October than September in six of the ten provinces. These increases occurred in Ontario (\$5.9 million), Quebec (\$5.1 million), Alberta (\$1.8 million), Manitoba and Saskatchewan (\$0.7 million each) and Nova Scotia (\$0.5 million). No change was recorded in either Prince Edward Island or British Columbia. Total wages and salaries declined from September to October in New Brunswick (\$0.4 million) and Newfoundland (\$0.6 million).

## Percentage Changes in Monthly Estimates

	Unadjusted		Seasonally adjusted

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

# ESTIMATES OF LABOUR INCOME

November 1965

Wages, salaries, and supplementary labour income declined \$12.2 million or 0.5 per cent from October to November and was estimated at \$2,288.8 million. A similar decline was evident in the total of wages and salaries.

Seasonally-adjusted labour income was estimated at \$2,263.4 million in November and was \$23.3 million or 1.0 per cent higher than the October figure. Most of this increase was attributable to higher levels of wages and salaries in construction (\$6.6 million), manufacturing (\$6.1 million), service (\$4.5 million), trade (\$2.0 million) and transportation, storage and communication (\$1.6 million).

Wages and salaries, seasonally-adjusted, advanced from October to November in all provinces with the exception of Prince Edward Island. Gains in excess of the national increase of 1.1 per cent were recorded in Newfoundland (2.1 per cent), British Columbia (1.5 per cent), Manitoba (1.4 per cent) and Ontario (1.2 per cent). Total wages and salaries in both Nova Scotia and Saskatchewan advanced 1.0 per cent from October to November and those in Quebec rose 0.9 per cent. Wages and salaries also increased in New Brunswick (0.7 per cent) and Alberta (0.4 per cent) during this same period.

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.

## WAGES, SALARIES AND SUPPLEMENTARY LABOUR INCOME

## WAGES AND SALARIES IN MANUFACTURING

# ESTIMATES OF LABOUR INCOME

DECEMBER 1965

Canadian employees earned a total of \$2,241.1 million in the form of wages, salaries, and supplementary labour income in December. This total was \$51.3 million or 2.2 per cent lower than the November estimate.

Seasonally-adjusted labour income rose to a total of \$2,286.8 million in December and was \$19.7 million or 0.9 per cent higher than the previous month. This increase resulted mostly from gains in wages and salaries of manufacturing (\$8.2 million) and construction (\$7.9 million). Somewhat smaller increments occurred in service (\$1.6 million), forestry (\$1.4 million) and agriculture, fishing and trapping (\$0.7 million). Wages and salaries for the transportation, storage and communication group declined \$1.2 million from November to December.

The preliminary annual total of labour income for 1965 was 11.1 per cent higher than the 1964 figure. This increase was the largest year-to-year change recorded since the expansion period of 1956. Construction wages and salaries had the largest relative gain of 24.0 per cent and both service (13.3 per cent) and mining (12.9 per cent) had increases which were also above the national figure. Wages and salaries in forestry, in manufacturing and in trade advanced about 10.5 per cent from 1964 to 1965. Other substantial increases were recorded in transportation, storage and communication (8.8 per cent), finance, insurance and real estate (8.4 per cent), public utility operations (8.1 per cent) and government non-military (7.5 per cent).

## EXPLANATORY NOTES

### CONCEPTS AND METHODS

Wages and salaries is specified to include living allowances, bonuses, commissions, and "tips" and is measured prior to deductions of all kinds (income tax, employees' contributions to the Unemployment Insurance Fund and to welfare and pension funds, etc.). Both money payments and payments in kind (i.e. free board and lodging) made to, or on behalf of, residents of Canada, excluding military pay and allowances, are included in the total of wages and salaries. Retroactive wage payments are included in the month in which they are paid. Supplementary labour income comprises payments made by employers on behalf of their employees in order to provide them with future benefits, either definite or contingent. Specifically, these payments include employers' contributions to employee welfare and pension funds, to workmen's compensation and industrial vacation funds, and to the Unemployment Insurance Fund. Contributions to armed forces pension funds are also included. Labour income is defined as the total of wages and salaries and of supplementary labour income.

The annual estimates of labour income are based in most cases on survey data collected by DBS, published accounting records, or information otherwise obtained directly from business or government agencies. In a few cases information is not available for non-census years and projections from census "benchmarks" are made using the best available related indicators. Comprehensive notes on concepts and methods relating to the preparation of labour income estimates are contained in the reference paper Labour Income 1926-58. Information relating labour income estimates to the national accounts may be found in National Accounts, Income and Expenditures: 1926-56.

About four-fifths of current labour income is estimated by applying payroll indexes to the latest available annual benchmarks. These payroll indexes are obtained from a monthly survey of establishments normally employing fifteen or more persons (see the DBS monthly publication Employment and Payrolls). For industries not covered by this survey the estimates are based on indexes which are either derived from other sources of payroll information or specially constructed on the basis of related data. A constant number of working days is assumed for each month in order to avoid the effects of differences in numbers of holidays and week-ends.

### STATISTICAL PRESENTATION

In order to obtain a historical record of labour income statistics, the following publications should be consulted: Estimates of Labour Income (December 1964 to November 1965) for the year 1961; (December 1963 to November 1964) for the year 1960; (December 1962 to November 1963) for the year 1959; (December 1961 to November 1962) for the year 1958 and (December 1960 to August 1961) for the year 1957. The reference paper Labour Income 1926-58 contains a record of data on labour income to the end of 1956. Monthly data on provincial wages and salaries for the months prior to January, 1961 are available upon request.

The latest monthly figures are preliminary and subject to revision in the next issue. In addition, all figures for recent years are subject to further minor revisions as new annual source materials become available.

The monthly figures in this report are presented with one digit after the decimal point, i.e. to the nearest tenth of a million dollars. This is done in order to avoid sudden changes in estimates for small provinces or industries which would occur if the figures were rounded to the nearest million, and it should not be assumed that the estimates are accurate to the nearest tenth of a million.
